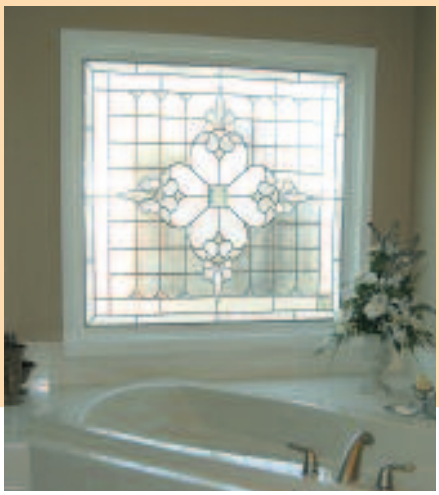
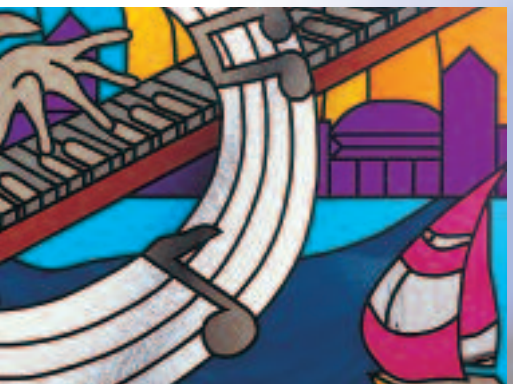
DECORATIVE OVERLAY SYSTEMS



Photograph courtesy of Elegance In Glass Studio, Arizona, USA

RegaLead products are based on an adhesive overlay system which bonds colour, bevelled glass and lead lines to a single piece of glass or plastic to create stunning leaded-effect looks that offer a number of advantages over the traditional art of leaded glass.

Manipulation of colour



- **Lower weight** - it is a single piece construction and does not require triple glazing
- **More design freedom** - lead lines and support rods are not required for strengthening the panel
- **Greater architectural freedom** - products can be bonded on non-glass products (ideal for ceiling lights and panels)
- **Lower cost** - the system is quick to work with, reducing labour costs considerably

The RegaLead decorative overlay system has been continually developed and improved over the past 30 years and can be seen in a wide range of applications, including:

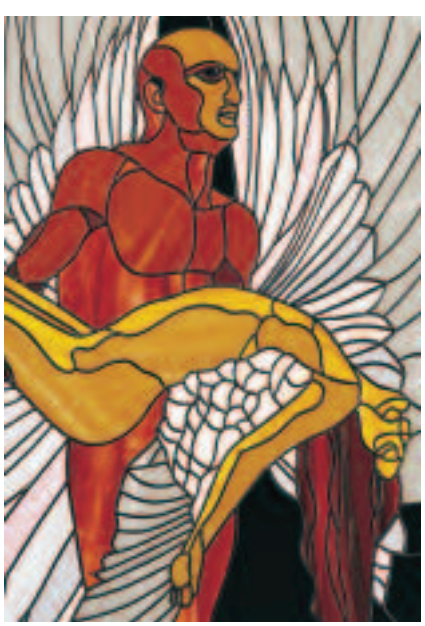
- **Windows and doors**
- **Kitchen cabinets and furniture panels**
- **Mirrors**
- **Over-tub windows**
- **Room dividers**
- **Ceiling light panels**
- **Glazed roofs**

It is these unique advantages and wide range of possible applications that have resulted in Regalead supplying over a thousand direct and many thousands of indirect customers, in over 75 countries around the world, from Europe and the USA to the Far East and Australia.

Over the past 30 years, the products have been specified for use in bars, restaurants, offices, shopping malls and public buildings - as well as in many millions of homes around the world. RegaLead overlay products are now firmly established as technically proven and the designer's choice in most of the world's leading markets.

Enhancing the appearance

Atrium ceiling at The Water Millock, Bolton, UK. Designed and produced by Stained Glass Creations



A clear pane of glass...

add RegaLead profiles to create a traditional glass look with the simple elegance that lead can bring. With the appearance of authentic lead caming, but the added structural and design versatility of our entire Overlay system, our self-adhesive profiles are as popular as they are easy to use.

As the UK's leading manufacturer of self-adhesive lead, RegaLead has developed an extensive range of profiles to suit every requirement. Using our unique production technology, we've developed the use of electrophoretic and polyester powder coatings, allowing us to create a fantastic selection of 14 different standard colour options. If that wasn't enough, RegaLead is available in 16 different widths, and 4 different profiles, giving our customers the largest range of self-adhesive leads available on the market today.

Stained Glass Art film

FOR OUR FULL RANGE OF FILMS - SEE PAGES:
A17 - A52

add eye-catching colour with our Stained Glass Art Film collection with over 350 coloured, patterned and textured film overlays. Versatile enough to be used within insulated glass units, applied to mirrors and even on curved surfaces, our film range allows incredible design freedom and creates stunning effects.

Our Stained Glass Art Films are available in a selection of styles, from plain translucent colours to wisps and metallic effects. We also manufacture clear textured films to replicate the look of patterned or privacy glass. In addition to the films, our printing experts have created a range of pre-printed fanlight designs for conservatories and kitchens. We are also delighted to offer a Digital Art Film service - our bespoke printing facility which can reproduce any design onto film.

...is just that...a plain piece of glass!

By adding colour, pattern, texture, you are adding style, character, individuality and value. Just how, is easy with the options offered by RegaLead.

add individual style, colour and appeal with a clear or coloured RegaBevel. Our precision-made bevels are crafted from quality 5mm float glass and feature finely feathered 1.8mm edges so they perfectly fit with our lead profiles.

RegaLead pioneered the use of glass bevels in the UK and our ever-expanding collection is now the most extensive single range available in Europe. Featuring over 500 designs, our beautiful collection includes Dichroic, Multi-Faceted, Glue Chip and Concave bevels in addition to our clear and coloured range. If that wasn't enough, our bespoke bevel manufacturing service can facilitate any possible customer design requirements.

RegaBevels

FOR OUR FULL RANGE OF GLASS BEVELS - SEE PAGES:

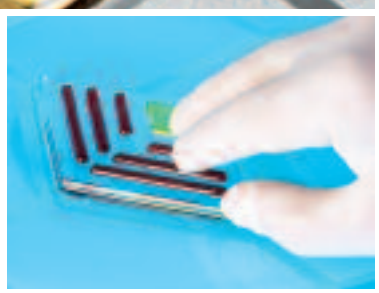
fusion TILES

FOR OUR FULL RANGE OF FUSION TILES - SEE PAGES:
A117 - A134



add the brilliant simplicity of Fusion Tiles to create a contemporary touch of style in your decorative designs. We've made the luxury of stunning fused glass affordable, while still maintaining the traditional techniques used to make it.

With the most comprehensive collection of fused glass tiles available in the marketplace, RegaLead offers the best selection of styles and applications. These include tiles made from Spectrum's artistic glass, traditional Murano glass from Italy and, as our newest addition, Spanish glass fused with Gold and Silver leaf.

Accentuate the Fusion Tiles with our new collection of stainless steel Inox Elements...the perfect accessory. See the full range on pages A133 - A136.

Marketing Support

RegaLead can now offer the widest range of marketing materials to help our customers effectively sell our decorative overlay products. All our catalogues and swatches have been specifically designed to ease the sales process, and many of them are now available with your own branding.

For customers who are looking to create their own brochures, we now have a library of thousands of images which can be supplied. Alternatively, our marketing partners at Refresh Media Design can develop catalogues, marketing and websites at specially negotiated prices.

Lead Swatches

Lead swatch cards have a small sample of every lead colour and lists the widths and profiles available for each. They are available with either RegaLead or customised branding.

Lead Swatch Card (Complete)
£1.50

Self-assembly lead Swatches. Includes: 150 Cards, 10m x 4.5mm of each 13 lead colours
£75.00

Own-branded lead Swatches for self-assembly. Includes: 150 Cards, 10m x 4.5mm of each 13 lead colours and artwork charges
£165.00

Design Software

For use with all our overlay products, GlassEye 2000R is a customised CAD drawing package specifically developed for designing overlay and traditional stained glass.

For more information on GlassEye and other design software options, please refer to Section F.

Stained Glass Art Film

Swatches: Swatches are printed onto clear acetate, clearly showing the opacity level of the film, with the individual pieces measuring 115mm x 60mm. Fan swatches of the complete catalogue of films are available as a set or individually. Additionally, we can produce customer branded covers and backs with up to 100 colours.

Samples: Our samples service allows you to select individual film pieces which can be used to indicate colour clarification, style and reference for your customer.

Training Support

With over 30 years experience in producing Overlay materials and our own decorative glass production business based in Scotland, we can offer training and support second to none. Training customers has been at the core of our business philosophy since we began and our commitment to this business model has never waned.

We now have a fully equipped training facility at our Manchester site and employ a full-time glass designer and trainer, whose role is to assist customers in getting the most from the fantastic RegaLead range.

For customers who are looking to start using our products in a more mass production environment, our Decorative Door Products division in Hawick, Scotland can offer practical training and advise on best practice, how to gain production efficiencies and working with insulated glass.

We appreciate that not all customers can, or will want to come to us for training, so we offer on-site training anywhere in the world either via our network of distributors and agents, or with our UK based staff.

Technical Support

As well as offering practical advice on the application of our products, we also provide a full range of technical support and data to support international standards:

Photo courtesy of British Standard Institute

EN1279

All RegaLead overlay products have been extensively tested to the requirements of EN1279 and we can provide certificates of conformity for volatile content and sheer and adhesion testing. We work closely with UK-based consultants, CEN Solutions, who can assist customers in meeting the requirements of this standard.

Canadian Fog Box Test

RegaLead profiles have been successfully tested via CanBest to the exacting requirements of the 2189 Fogging Test for the USA and Canada.

Pilkington Active Compatible

RegaLead profiles and UV adhesives have been approved by Pilkington for use on their Activ™ coated glass surface.

RegaLead®

LEAD PROFILES

RegaLead is the UK's leading manufacturer of self-adhesive lead profiles, producing in excess of 30 million metres per year! With 13 finishes and widths ranging from 2mm to 22mm, we've a choice of profiles to suit every requirement.

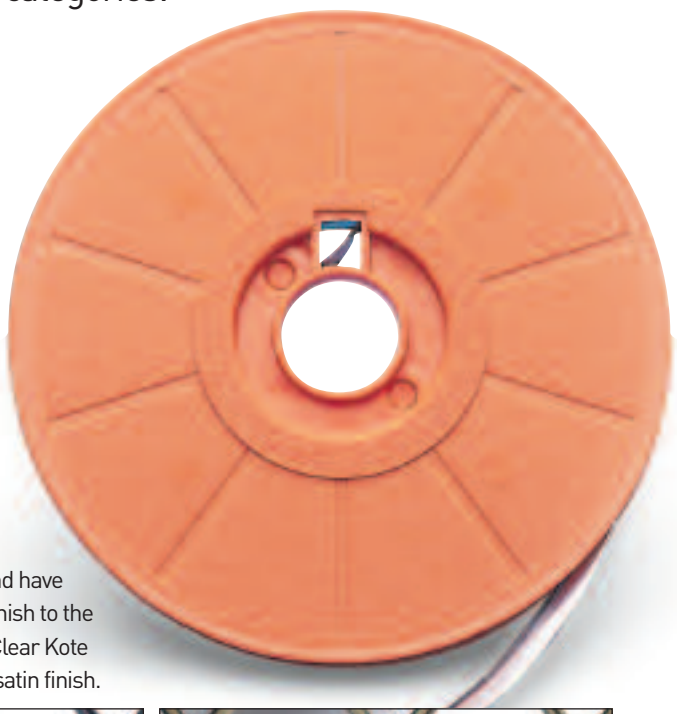
Our self-adhesive profiles are made with 99.5% pure lead, modified with a small amount of antimony to improve weathering performance and surface polish. Every profile has a high-performance, pressure sensitive, acrylic adhesive which makes them suitable for permanent application to both interior and exterior glass surfaces in both single and double glazed units.

The lead is manufactured to ISO 9001:2008 quality standards, and additional weather and age testing to ASTM G154-06 standards has been conducted on the coated leads.

We've created 13 colour options which are split into 3 categories: Natural, Electrophoretic Coated and Powder Coated.

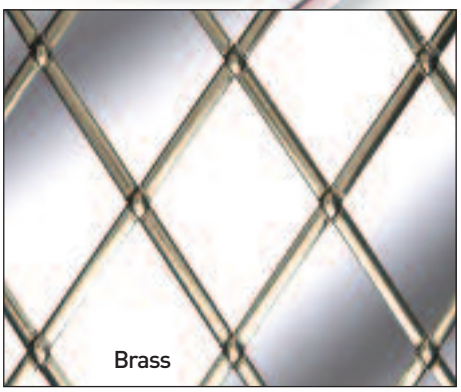
Natural

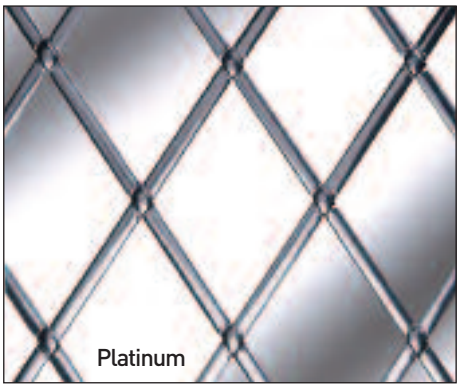
Our Natural Lead has no coating and will oxidise over time to give the weathered look of traditional old leaded windows. It is possible to solder natural lead.



Electrophoretic Coated

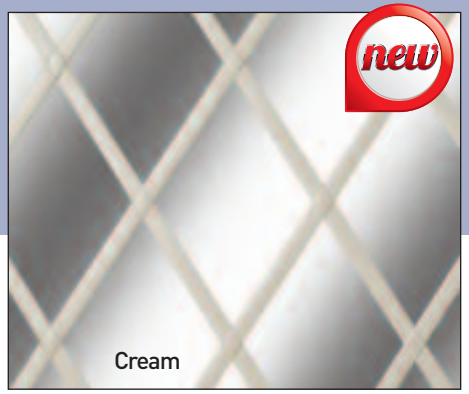
We were the first supplier to develop the use of electrophoretic coatings for lead, and have created our own unique production technology which gives a clean, even and fine finish to the lead surface. Suitable for exterior use, our range comprises of Antique, Platinum, Clear Kote and Brass with the standard gloss finish, and Satin Antique and Satin Brass with a satin finish.

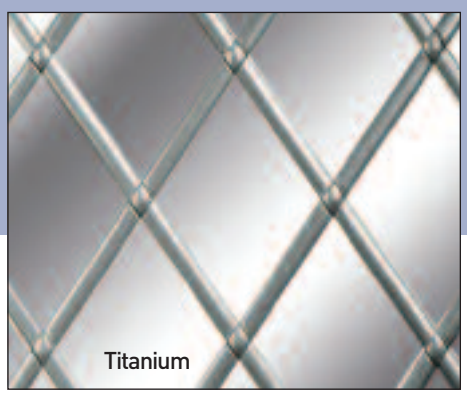


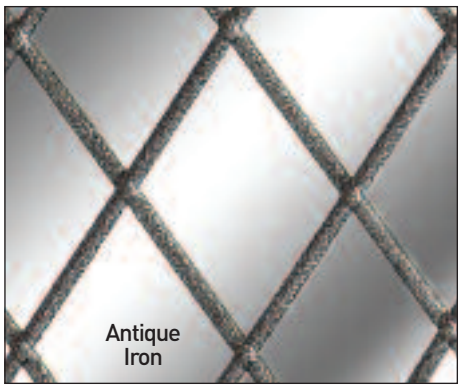


Powder Coated

Our newest finish, polyester powder coating, offers significant resistance to scratching, but is not guaranteed for exterior use. This finish is available in White, Chrome, Titanium, Ebony and Gold, in addition to Antique Iron and Antique Copper, which showcases the unique hammered effect we've created. We can also create special colours if required and minimum volume is 600 reels (4.5mm)







Custom Colours

With our powder coating technology, it is now possible to produce custom colours of lead profiles in economical volumes. We offer a full range of RAL colours and specialist metallic effects from Akzo Nobel, the world leader in powder coating technology. Minimum volumes for a specialist colours are:

PROFILE WIDTH	4.5mm	6mm	9mm	12mm
REELS	600	480	300	240

Special colours can be manufactured on all profiles and can be mixed widths.

Lead Sizes

To complement the large selection of colour options, our lead is available from 2mm to 22mm and comes in three distinct shapes: Oval, Flat and Heritage.

Oval and Flat Profiles

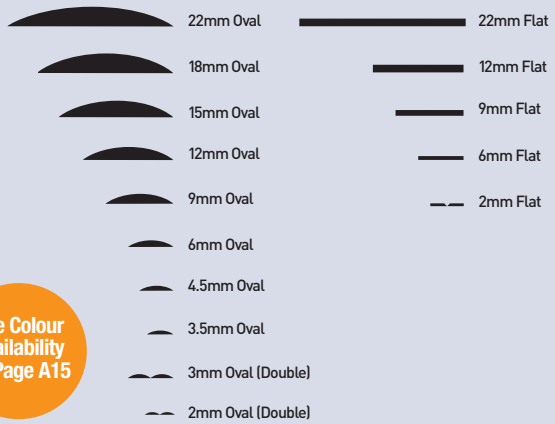
15mm, 18mm and 22mm
Popular for creating rectangular lead styles on larger areas or for backing-up of face-fixed Georgian/Muntin bars.

9mm and 12mm
Used mainly for straight line leading styles or as a border.

6mm
The perfect width for leading around glass bevels and borders.

3.5mm and 4.5mm
Popular widths for use with Stained Glass Art Film and for detailed work.

2mm and 3mm
These leads are supplied 'kiss-cut' in easy to split double strands and are commonly used for fine detailed applications.



See Colour Availability on Page A15

Heritage Profiles

Our Heritage profile lead is used to match traditional lead caming and is often used on historic buildings. The Heritage lead has raised 'ridges' on either side of a flat profile and is designed to be used in grid patterns. Heritage lead is available in the following sizes:

Available in Antique and Natural Only

Technical Information

Lead Oxidisation

Like many natural materials, lead is subject to an atmospheric transformation when exposed to the environment. This process, called Oxidisation, is entirely natural and eventually causes the lead to adopt a 'weathered' appearance like that found in traditional stained glass windows.

Why does oxidisation occur?

When lead is exposed to environmental factors, particularly rain or snow, compounds within the metal react to form a natural, non-porous surface coating. This protects the lead by preventing any further reactions with the atmospheric conditions. It is this natural protective barrier, called a patina, that gives the traditional look.

Factors affecting oxidisation

There is no way to tell how quickly oxidisation will occur. The main influencing factors include time of year, weather conditions, location, environment and airborne contaminants.

The process of oxidisation

Several temporary effects are visible during oxidisation and are most noticeable in the initial stages. The lead can take on the appearance of several different colours, often looking bronze, blue, gold and green, creating a similar effect to that of oil on a wet road. This is a natural part of the process and the colours will gradually fade.

Another common part of the oxidisation process is the appearance of discolouration, spotting and white powdery deposits. This occurs when the lead first comes into contact with water. Like the colour changes, this part of the process is natural and temporary. However, as the white powder can often run during wet weather, it is necessary to wipe it off occasionally to stop it staining the glass or the window frames.

Treating the lead

There is no need to treat the lead as the process will occur naturally. However, Patination Oil can be applied to prevent any discolouration or blemishes in the early stages. Additionally, this controls the process by encouraging the patina to form more quickly. When using Patination Oil, it is important to apply it as soon as the lead profile is installed, as once the natural process starts, and any blemishes appear, it will be too late to use it. Patination Oil can stain glass so apply to lead only.

For more information and to see our Patination Oil product range, please see page A148.

Technical Specifications

Colour options available can be split into 3 categories:

Natural Lead has no coating and will oxidise over time to give the 'weathered look' of traditional old leaded windows. To improve the performance of natural lead, we recommend using patination oil. It is possible to solder natural profiles.

Coated Leads use advanced pigmented polymers to create the extra colour options in Brass, Satin Brass, Antique, Satin Antique, ClearKote and Platinum. These coatings also provide additional weather resistance and retain their appearance for many years.

Brass coated products are only guaranteed when encapsulated in triple glazed units.

Polyester Powder Coating gives the White, Gold, Cream, Ebony, Titanium, Antique Iron and Antique Copper their colour and these finishes are recommended for interior applications only as they offer limited weather resistance.

For further technical information, visit the brochures/data sheets section of our website www.regalead.com and download technical data sheets TDS01, TDS02, TDS04 and TDS24.

Health and Safety

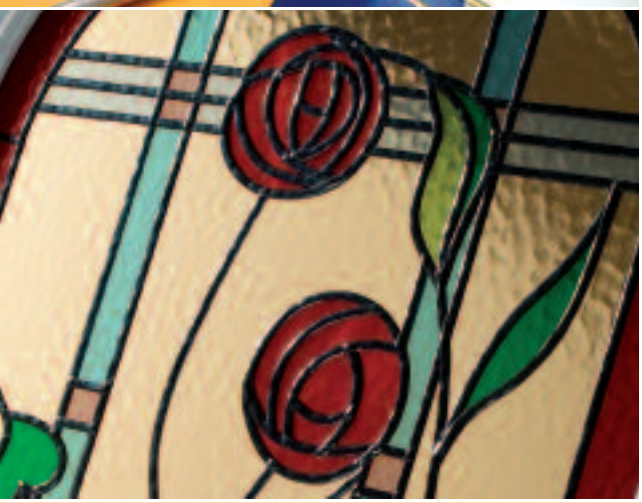
It is recommended that you follow health and safety precautions when working with and handling lead. The Lead Health and Safety data sheet, published by the Health and Safety Executive can be downloaded from: **www.hse.gov.uk - see publications/ free leaflets/lead.**

For California residents title 22, article 6 (proposition 65) on Clear and Reasonable Warnings should be followed.

Stained Glass Art film

DECORATIVE FILMS

With over 350 colours and a range of special effects, Stained Glass Art Film is our collection of printed and embossed overlay film materials. Stunning and practical results can be achieved whether it's privacy, light diffusion or just beautiful decorative glass. Our Digital Art Film service, Pre-printed Fanlights and View to Nature transfers beautifully complement our Stained Glass Art Film Range.



Stained Glass Art Film

Only the finest quality, polyester-based materials and UV stable inks are used in the making of Stained Glass Art Film. Guaranteed not to fade, crack or de-laminate (ask for a copy of our guarantee), they also feature a three layer construction with built-in UV filters to give them excellent weathering performance. The specially formulated top laminate layer, protects the inks, increases UV resistance and maintains a high level of scratch resistance.

Designs can be created that benefit from over 90% UV filtration when complete coverage of the glass is used. Stained Glass Art Film also acts as a safety film when 100% coverage of untempered glass is used - in accordance with the US safety glass standard ANZI Z97.1-1984.

As these materials have been used throughout the world - from the heat of the Australian outback, to the cold of a Russian winter - with no reported failures, we are confident in giving a 10 year guarantee* and an estimated life expectancy of over 25 years.

Plain Colours

Plain colours, most of which are translucent, allow a high degree of light transmission and low level of obscurity. There is a wide range of choice from very pale tints to vibrant colours suitable for most applications. Plain colours can be used together with the background effects to give a textured appearance and gain a higher level of obscurity. Opaque plain colours are shown as '**OP**'. **Sheet Size: 460mm x 660mm**

Due to limitations of the printing process, colours may vary from those shown and the true level of opacity cannot be accurately represented. Batch-to-batch variation may also occur. We recommend ordering swatches or samples for a more accurate representation.

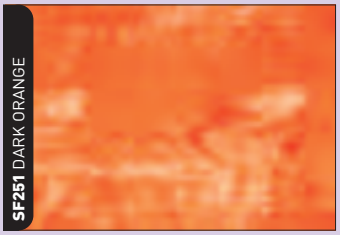
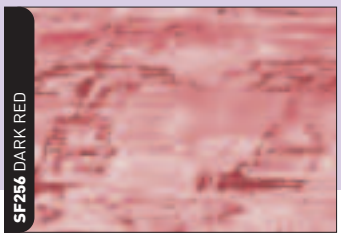
SF99 GRAPE

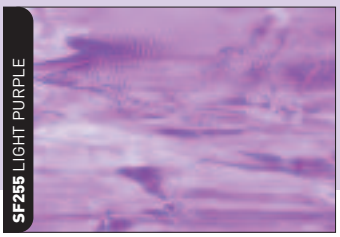
Due to limitations of the printing process, colours may vary from those shown and the true level of opacity cannot be accurately represented. Batch-to-batch variation may also occur. We recommend ordering swatches or samples for a more accurate representation.

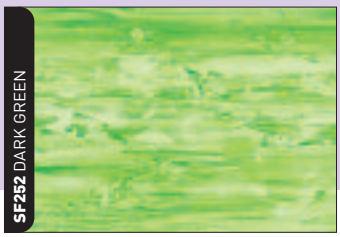
Light Grains

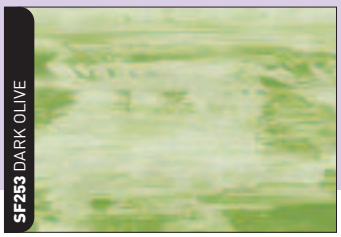
Light grains have a pale colour streaked across a clear background and can be used alone, or on top of a plain colour to add depth.
Sheet Size: 460mm x 660mm

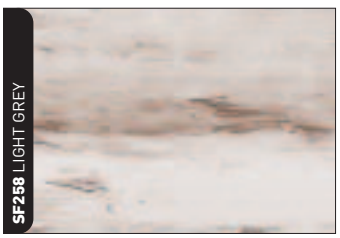


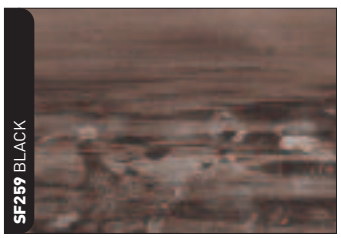


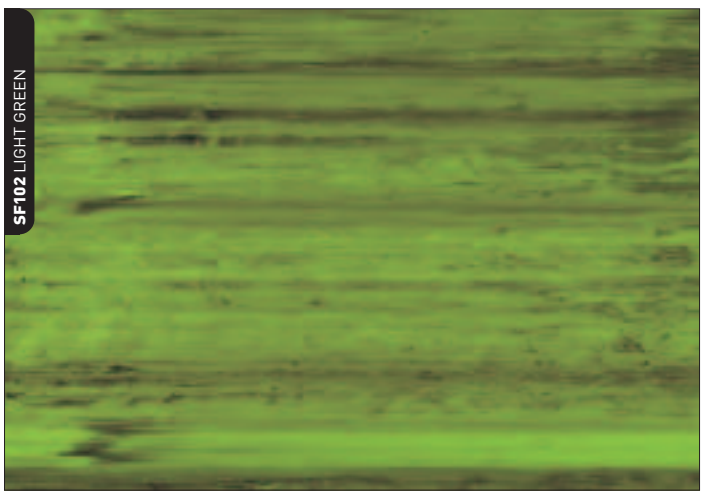






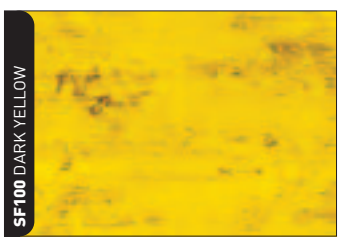


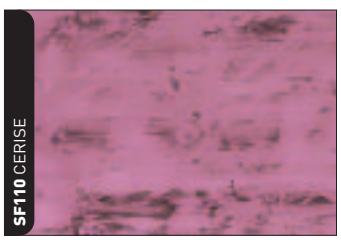


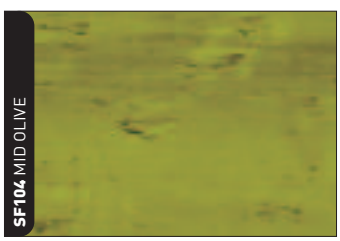


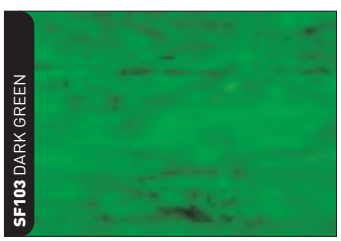
Dark Grains

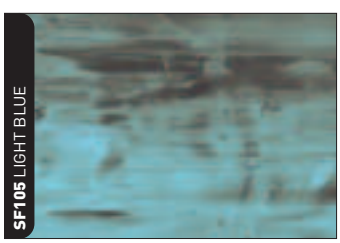
Dark Grains have a solid colour base with subtle black streaks.
Sheet Size: 460mm x 660mm

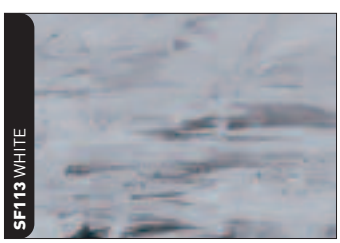






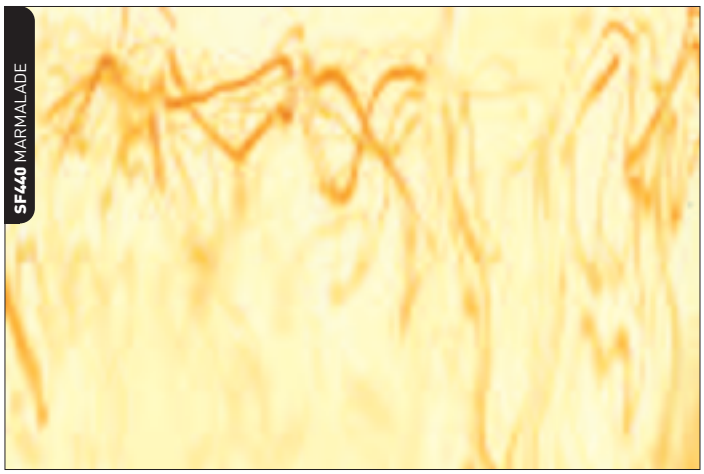






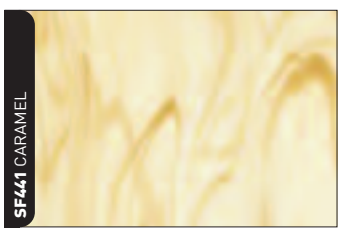
White Grains

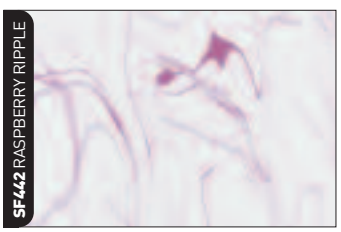
White Grains are a small selection of opaque colours, with a soft grain effect running through. **Sheet Size: 460mm x 660mm**

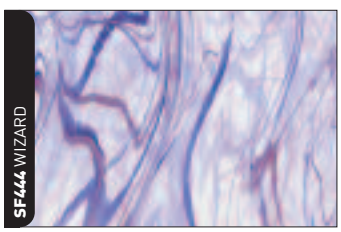


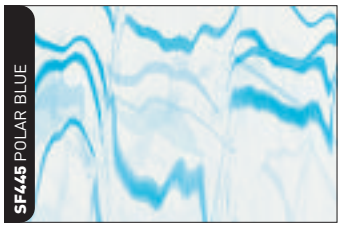
Opaque Ripples

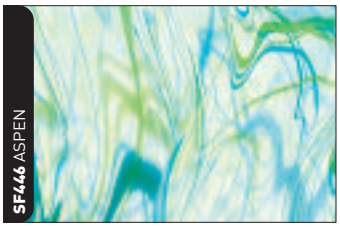
Opaque Ripples have pale background tones created by the contrasting ripples of colour. **Sheet Size: 460mm x 660mm**

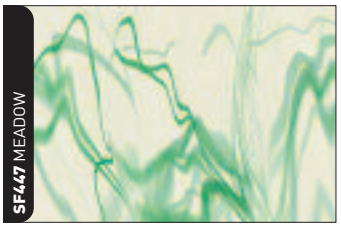












Due to limitations of the printing process, colours may vary from those shown and the true level of opacity cannot be accurately represented. Batch-to-batch variation may also occur. We recommend ordering swatches or samples for a more accurate representation.

Semi-Transparent Wisps

Semi-Transparent Wisps give the appearance of wispy glass, with vibrant swirls of colour through a clear background. They are ideal for use where a traditional stained glass effect is required and have a similar obscurity level to plain colours.**Sheet Size: 460mm x 660mm**

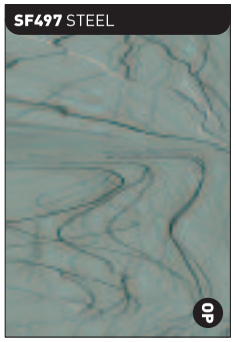
Abstracts

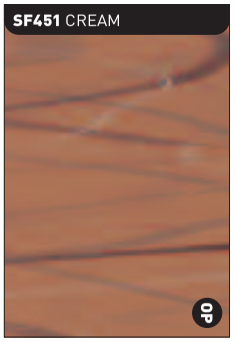
Abstracts have a dynamic abstract appearance, with one or more colours blended with white or clear.
Sheet Size: 460mm x 660mm

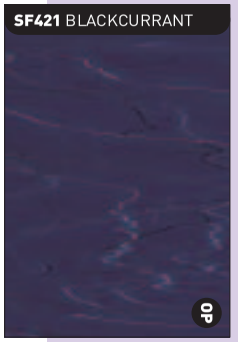
Due to limitations of the printing process, colours may vary from those shown and the true level of opacity cannot be accurately represented. Batch-to-batch variation may also occur. We recommend ordering swatches or samples for a more accurate representation.

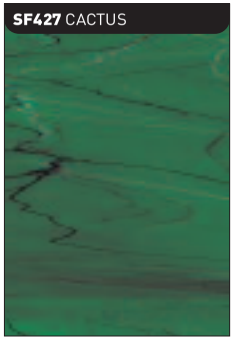
Veins

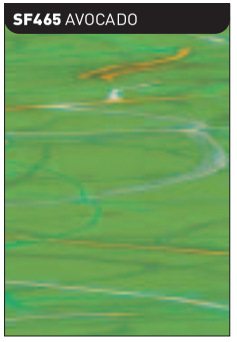
Veins have a transparent background with a veined pattern running randomly through the sheet in complementing and contrasting colours. Some veins have an opaque background and are shown as '**OP**'.
Sheet Size: 460mm x 660mm

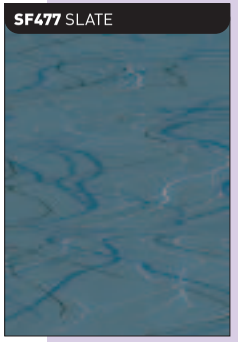


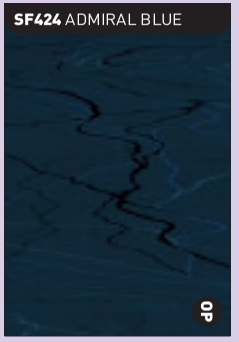


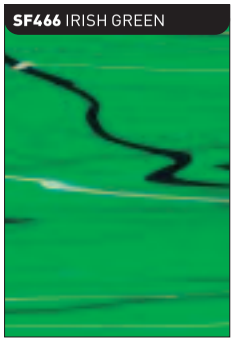


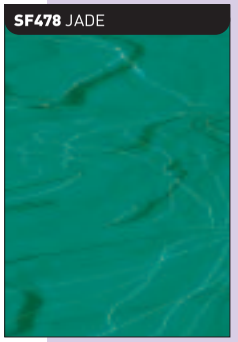


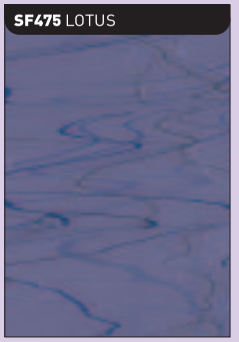


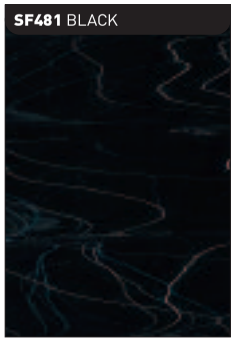


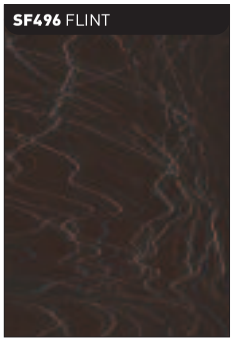


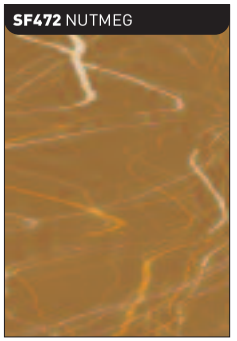


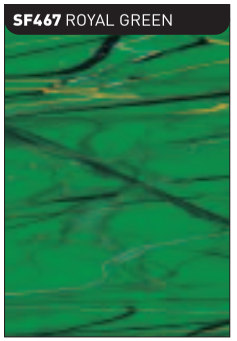


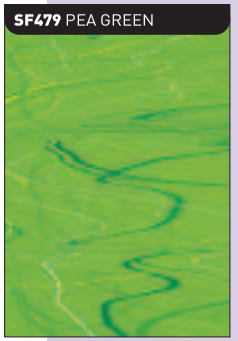


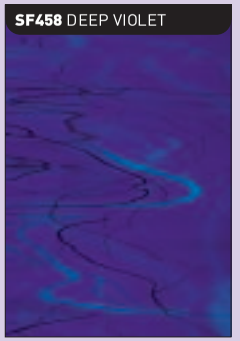








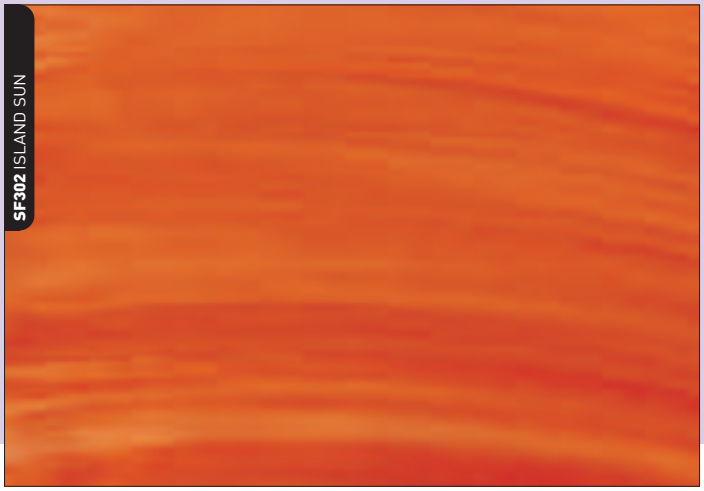


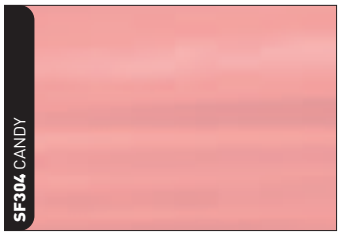


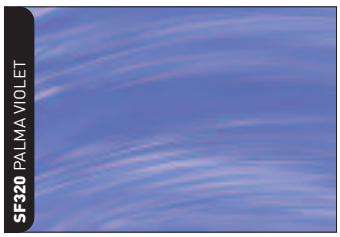
Due to limitations of the printing process, colours may vary from those shown and the true level of opacity cannot be accurately represented. Batch-to-batch variation may also occur. We recommend ordering swatches or samples for a more accurate representation.

Semi-Opaque Wisps

Semi-opaque wisps are subtle wisps with white, making them ideal for areas requiring a high level of privacy. **Sheet Size: 460mm x 660mm**

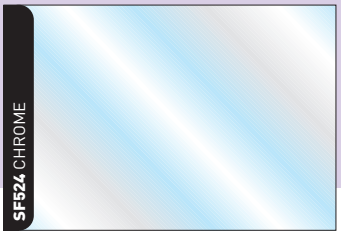


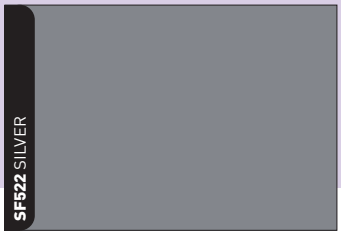


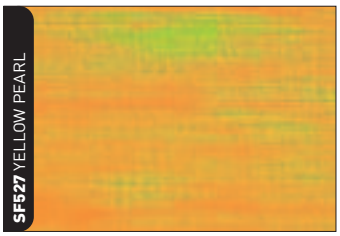


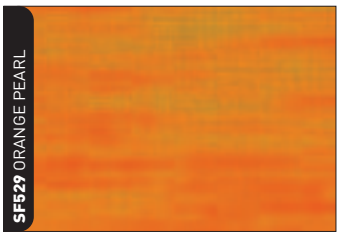
Lustres & Metallic Effects

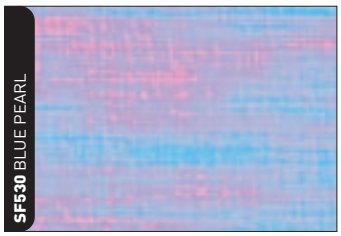
Metallic effects gold, silver, copper & mirror are solid with a high level of obscurity, and the metallic finish on the front. Pearls are clear and pale colours with a iridescent laminate on top, giving a mother of pearl effect.
Sheet Size: 460mm x 660mm (SF524: 510x690mm)

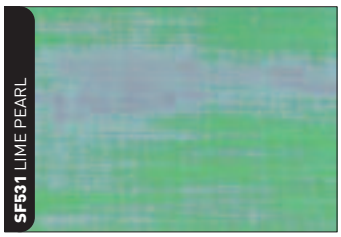


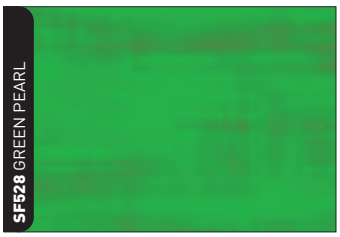


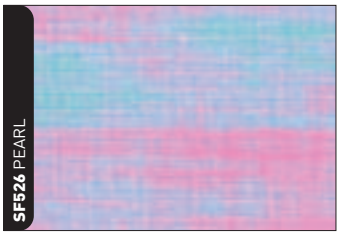


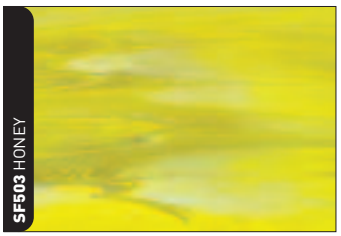






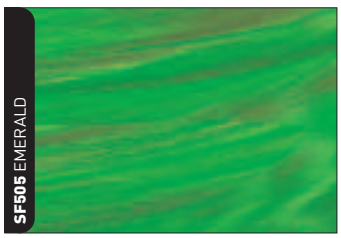


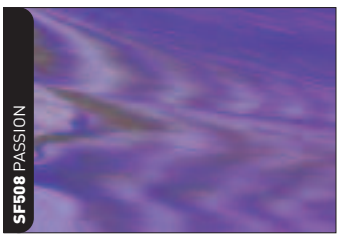




Metallic Wisps

Metallic wisps have vibrant swirls of colour through a clear background blended with copper or gold to add an opulent look.
Sheet Size: 460mm x 660mm

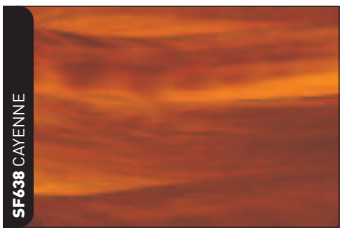


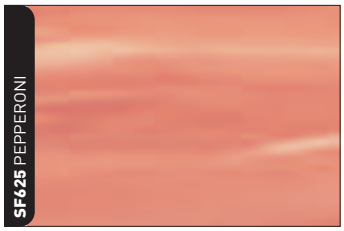


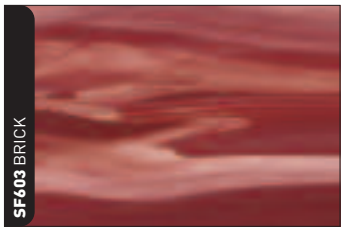
Due to limitations of the printing process, colours may vary from those shown and the true level of opacity cannot be accurately represented. Batch-to-batch variation may also occur. We recommend ordering swatches or samples for a more accurate representation.

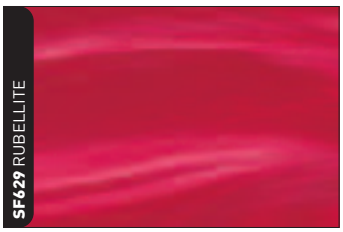
Streaky Opaques

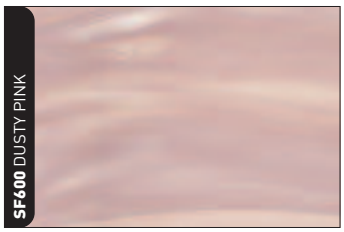
Streaky Opaques are a more traditional patterned film with many shades and tones and varying levels of opacity. Opacity varies throughout this range, the darker colours are less opaque. **Sheet Size: 460mm x 660mm**

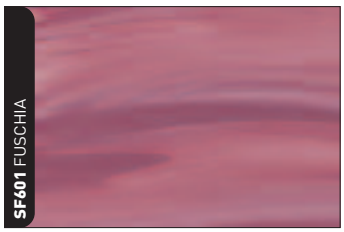


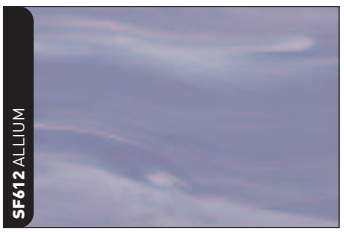


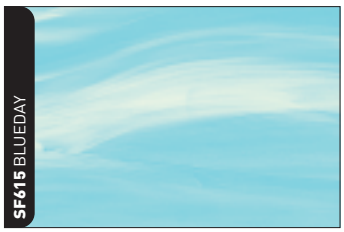


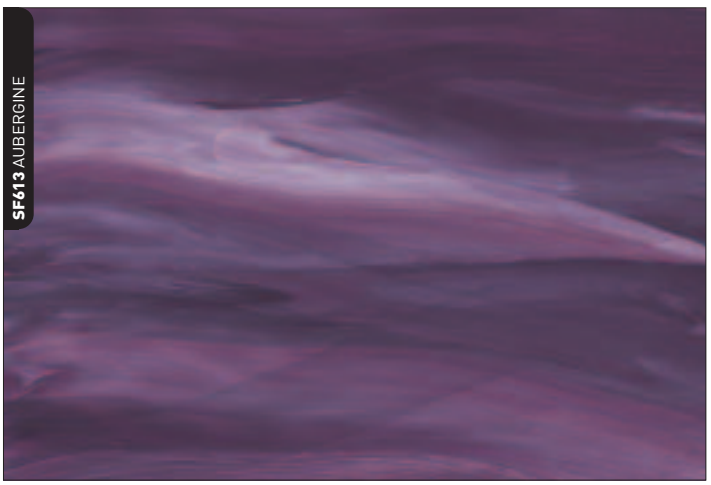


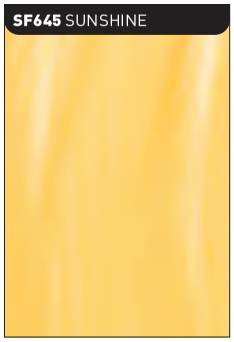


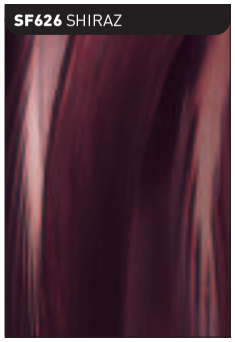


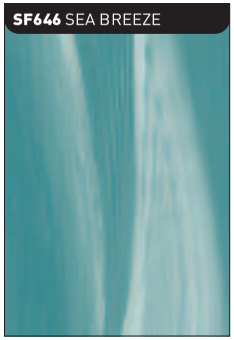


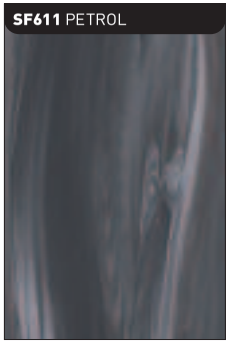


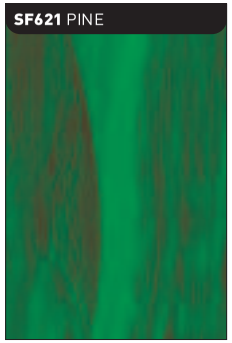




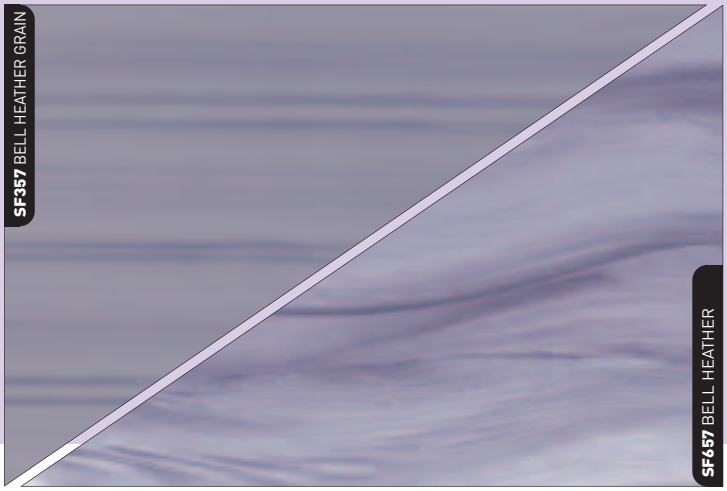








Due to limitations of the printing process, colours may vary from those shown and the true level of opacity cannot be accurately represented. Batch-to-batch variation may also occur. We recommend ordering swatches or samples for a more accurate representation.



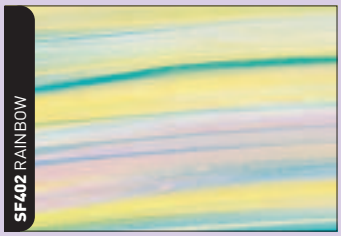
Opaque Soft Grains & Streaky Opaques

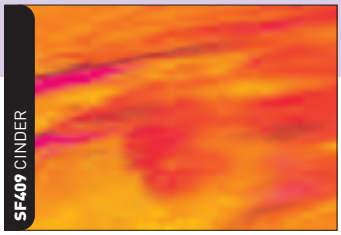
Our latest range of films is the Opaque Soft Grain series, which use complementary graining through traditional muted colours to give a traditional and subtle stained glass look.

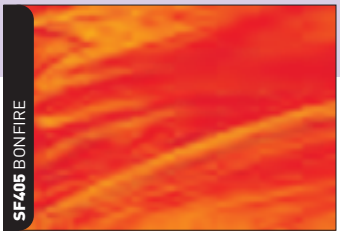
With these 12 products, there is a range of matching Opaque Streaky films which use the same base colour but have a more dramatic wispy effect running through them. **Sheet Size: 460mm x 660mm**

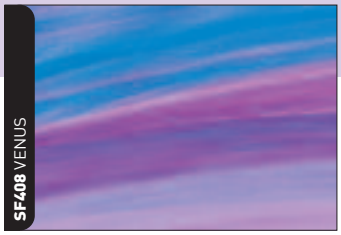
3-Colour Wisps

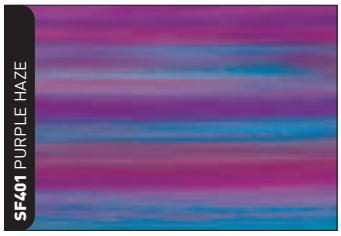
3-Colour Wisps have vivid streaks of colour bended across a clear background and can be used in areas where plenty of colour is needed. **Sheet Size: 460mm x 660mm**

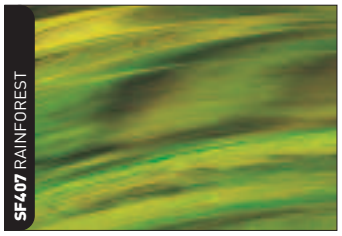


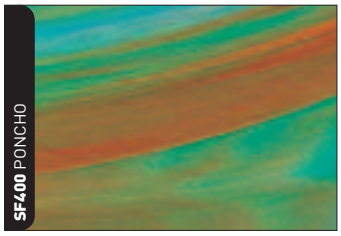






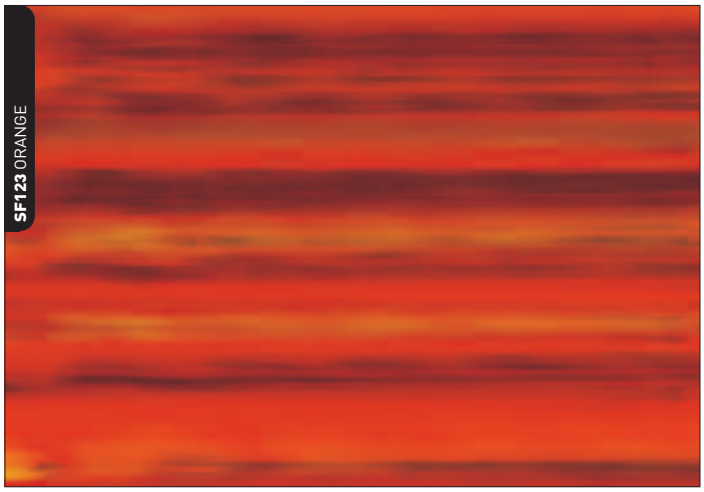


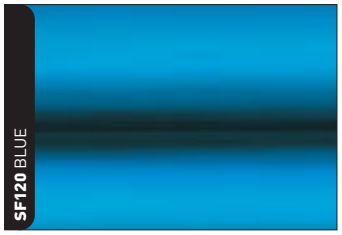




Colour Blends

Colour blends have horizontal lines of blended colours and are ideal for use where a shaded effect is required. **Sheet Size: 460mm x 660mm**



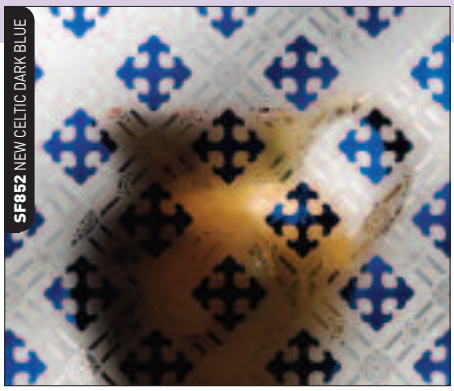


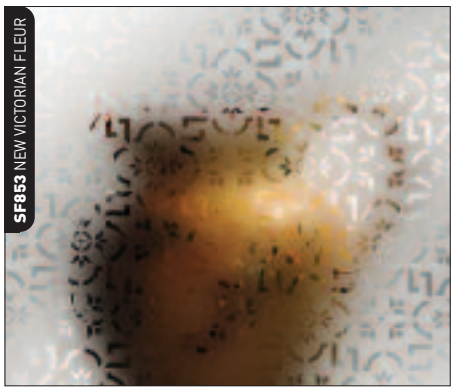
Due to limitations of the printing process, colours may vary from those shown and the true level of opacity cannot be accurately represented. Batch-to-batch variation may also occur. We recommend ordering swatches or samples for a more accurate representation.

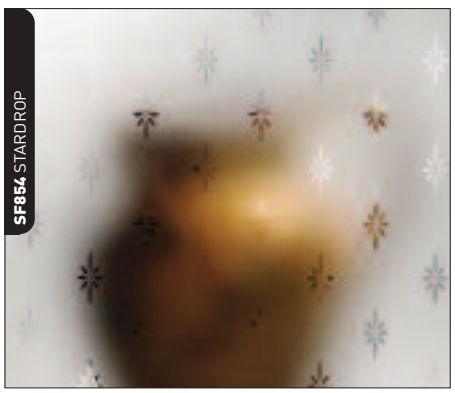
Etched Patterns

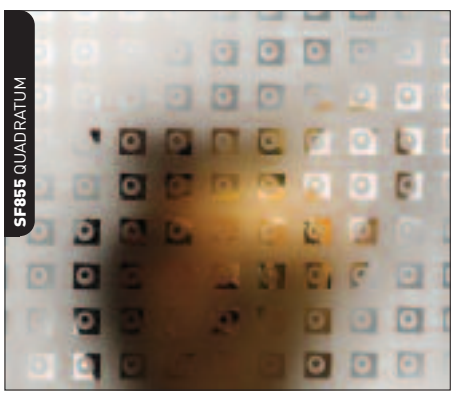
Our range of Etched Patterned backgrounds use the latest printing techniques to give a genuine looking, etched-effect which provides high levels of obscurity, whilst still allowing natural light through. This extended range of 8 stunning effects are based on Victorian and Edwardian etched glass styles and work fantastically well in both window and door applications.

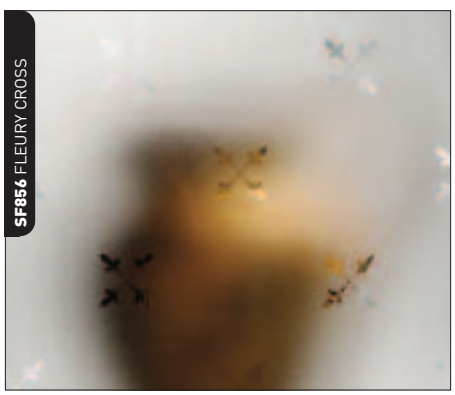
To allow for larger area coverage, these products are available in larger format. **Sheet Size: 960mm x 660mm**

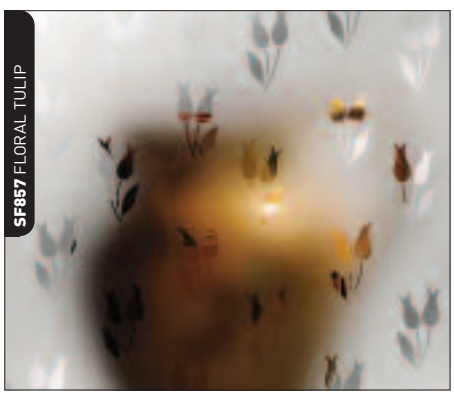












Borders

Our range of borders come in 3 traditional colourways and a neutral etched glass effect and are:

Large Format Textured Films

Sometimes, standard sized sheets of Stained Glass Art Films are not quite big enough for the design you have envisaged, which can cause a problem. Now that problem is solved with our extended range of textured films, available in larger format rolls. With 12 products to choose from and all manufactured to the same exacting standards as our standard sheets, you will be spoilt for choice.

Product	Width	Max Length	Priced	Min Order

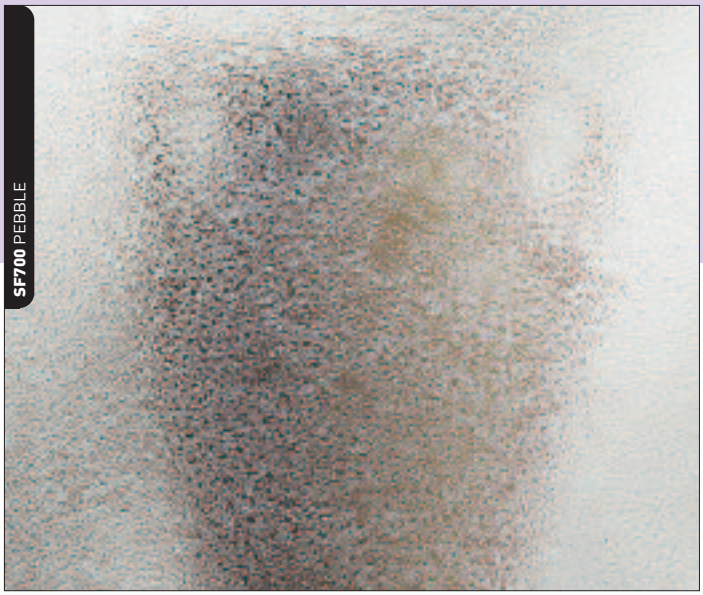
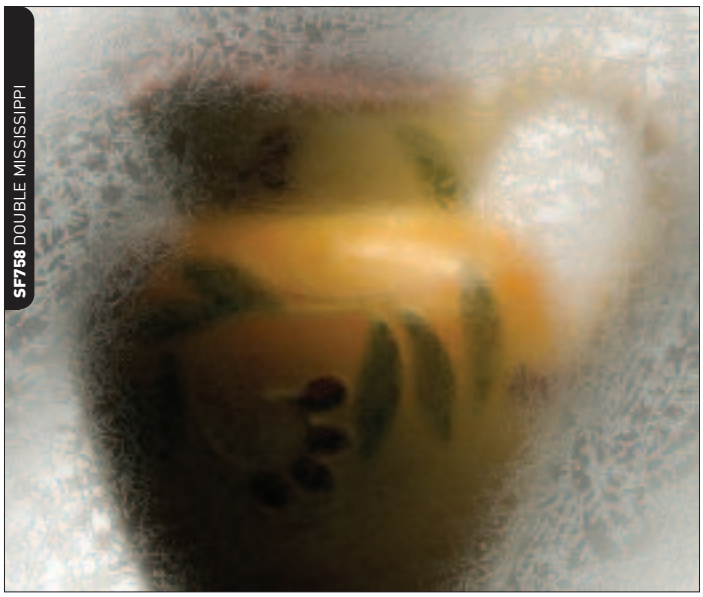
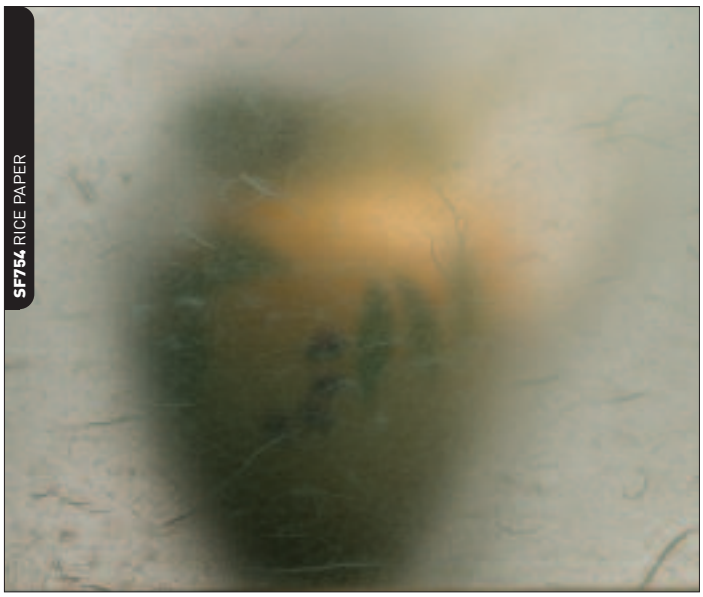
SF 754M Rice Paper	920mm	30mtr	by metre	5mtr







Digital Art Film

Our custom printed Digital Art Film service opens up a whole new area of glass decoration and can be used either in conjunction with our Overlay materials, or on its own for transforming plain glass into an artistic canvas.

It's so simple...

Our Digital printing service uses the same high quality base materials that we use in our Stained Glass Art Film range and the use of the latest UV printing technology gives a long lasting UV stable product that can be used in external applications.

We offer the option of either clear laminate or a frosty effect laminate where higher levels of obscurity may be required.

1

Create a design from a photograph, artwork file or alternatively choose from one of the online libraries like www.istockphoto.com* or www.gettyimages.com*

2

Send us the file along with the size and laminate specification required. We accept JPEG, TIFF and .EPS files **

3

Order confirmation will be returned for signing along with price. Please return ASAP as we cannot start production until this is received.

* Most online image libraries will have copyright terms that need to be adhered to and it is the responsibility of the customer to determine whether the use of the image infringes these terms.

** We can purchase images for customers but this will attract a 20% surcharge above the published price.

4

Our specialist design team will then convert your file into a format that is compatible with our printing equipment.

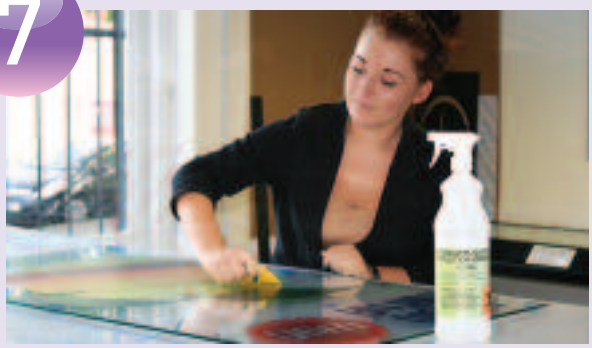
5

We will then print your design on our high quality, wide format UV printer and then laminate with either a clear or frost laminate.

6

Completed film will be ready for despatch within 10 working days of order confirmation.

7



Digital Art Film can be applied either wet or dry using the same methods as our Stained Glass Art Film .

8

It may be necessary with designs containing high levels of white, to back spray or apply white film to the rear to achieve the clarity, opacity and crispness required.

Pricing

440 x 660mm: Our standard sheet size is the most cost effective and is the minimum size possible. We recommend printing multiple images on the sheet if the design is smaller than the minimum sheet size. **£35.00/sheet**

960 x 660mm: Our oversized sheet size is ideal for many applications including cooker splashbacks and as with our standard sheet we recommend multiple images to fill the sheet. **£65.00/sheet**

Wide Format: we can print designs up to 1220mm wide with any length. **£125.00/m²**

Please Note: Artwork conversion charges of £35 will be applied to all orders.

Pre-Printed Fanlights

Adding a leaded coloured glass design to a fanlight is now easy to achieve with our range of pre-printed transfers. These traditional designs not only offer style, but also simplicity. Choose from an attractive array of floral or traditional motifs to imbue windows or fanlights with a subtle, yet striking refinement.

Each pre-printed fanlight design comes as an easy-to-use transfer, helpfully marked where our self-adhesive lead needs to be applied. They are carefully prepared using a high specification, colour-stable polyester film with built-in UV inhibitors and are equally effective when applied to clear or patterned glass.

While we believe we've created a complete and beautiful collection, our bespoke printing service can make any design, or alter existing ones, to add a unique character to any fanlight.

View to Nature

A beautifully unique option for decorating glass, our View to Nature designs are as simple to use as they are striking. With ten classic country scenes to choose from, available in two different sizes, these designs are perfect for creating a charming focus in any kitchen, conservatory or entry door.

Each pre-printed design is created with the same four colour process and UV stable polyester base material that we use to make our Stained Glass Art Film range, with an extra tough laminate layer to protect the stunning designs from scratching and UV rays. As transfers, they are easy to apply and the thick bordered edge makes leading around the design simple.

Film Application and Warranty

Characteristics & Colour Variances

Our films are a handmade colour product. It is common to experience some settle imperfections in this process. Clients may regard these as flaws or defects, but in reality, they are characteristic of the creation process. The gentle shading and imperfections in this film should not be regarded as defects. They are characteristic of the fine hand-crafted work, which gives this film its beauty and dramatic texture.

Due to the handmade nature of these products, there will be batch to batch variation in colour and on the non-plain films, no two sheets will ever be identical. We recommend that customers ensure that they have sufficient film from the same batch to complete any project if colour consistency is critical.

Application Guidelines

Dry Application

All our Stained Glass Art Films can be applied dry with a film application roller, but care should be taken with larger areas as the chances of bubbles and imperfections will increase. Dry applied films can be leaded straight away.

Wet Application

We would recommend the wet application of films as it leaves a clearer finish and allows for easy repositioning of the film.

Once applied, wet film should be left to dry for a minimum of 12 hours to ensure all moisture has dried off before leading.

For wet application, we recommend the use of our Film Application Solution (see page A149)

Sheet Sizes:
Standard Sheet: 460mm x 660mm
Oversize Sheet: 660mm x 960mm*

Temperature Range:
- 46˚C to 135˚C

UV Filtration:
90% to 95% ASTM E903

Fade Resistance:
6,000 hours (equivalent to 20 years) of direct solar ultraviolet exposure as specified in ASTM G-23 caused modest or no colour fading in the samples submitted.
All products rate 8+ on blue wool scale.

Maintenance:
Resists detritus effects for 5,000 cleaning cycles (equivalent to 20 years+)

IG Unit Performance:
Conforms to fogging requirements EN1279 and ASTM E 2190

Which surface to apply to?

Due to the construction of our film materials, most of the UV inhibitors are in the base film adhesive layer. For this reason, the best UV performance will be when the adhesive surface is facing out towards the sun, so products should be applied to the face of an insulated glass unit. WE DO NOT GUARANTEE FILM THAT HAS BEEN APPLIED IN ANY OTHER WAY.

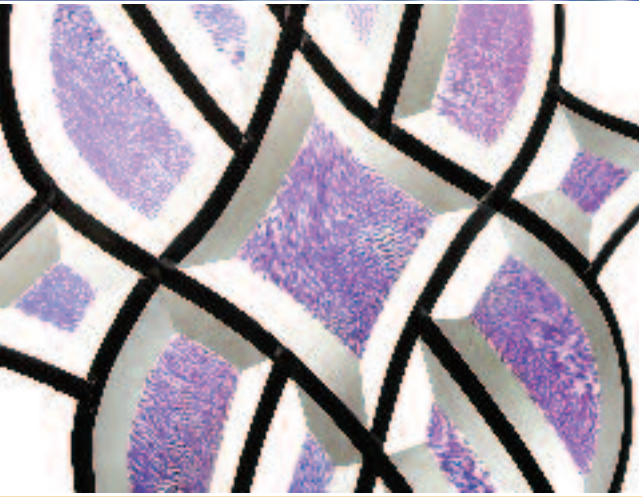
Multi-layering of Films

The Stained Glass Art Films can be applied in multiple layers to create new colours and effects. When multi-layering, it is important that any textured or UV printed backgrounds are applied last as they have uneven surfaces. It is also important to note that due to the opacity levels of the films, the colour may look different when viewed from different sides of the glass.

RegaBevels

DECORATIVE BEVELS

Our clear and coloured RegaBevels are precision made from quality 5mm float glass that bevels down to a 1.8mm edge. Fitting precisely with RegaLead lead profiles and complementing our range of stunning overlay materials, RegaBevels add style and individuality to decorative glass.



RegaBevels

Our ever-expanding collection now features over 500 designs and is the most extensive single range available in Europe. To complement our clear and coloured range, we provide bevels in a beautiful array of styles and textures. Our popular collections of Glue Chip, Dichroic and Multi-Faceted bevels provide a stunning alternative and key focal point in windows, doors, fanlights and much more!

Included in our extensive range is the stunning Designer Bevel Collection, an innovative concept for creating almost endless designs. With 34 shapes available in clear and coloured glass, these bevels have beautiful seamed edges for use without lead.

For even more choice, our Custom Bevelling Service can create bevels to any customer requirements! With the option to adapt existing bevels, incorporate logos or company designs, or even design a bevel from scratch, the possibilities are endless.

Custom Bevels

RegaLead is delighted to offer our custom bevelling service, which has been introduced to create more design options for windows, doors, conservatories and any other decorative glass applications. While we believe we offer the most comprehensive range of bevels possible, sometimes something unique is required to add that finishing touch to a project.

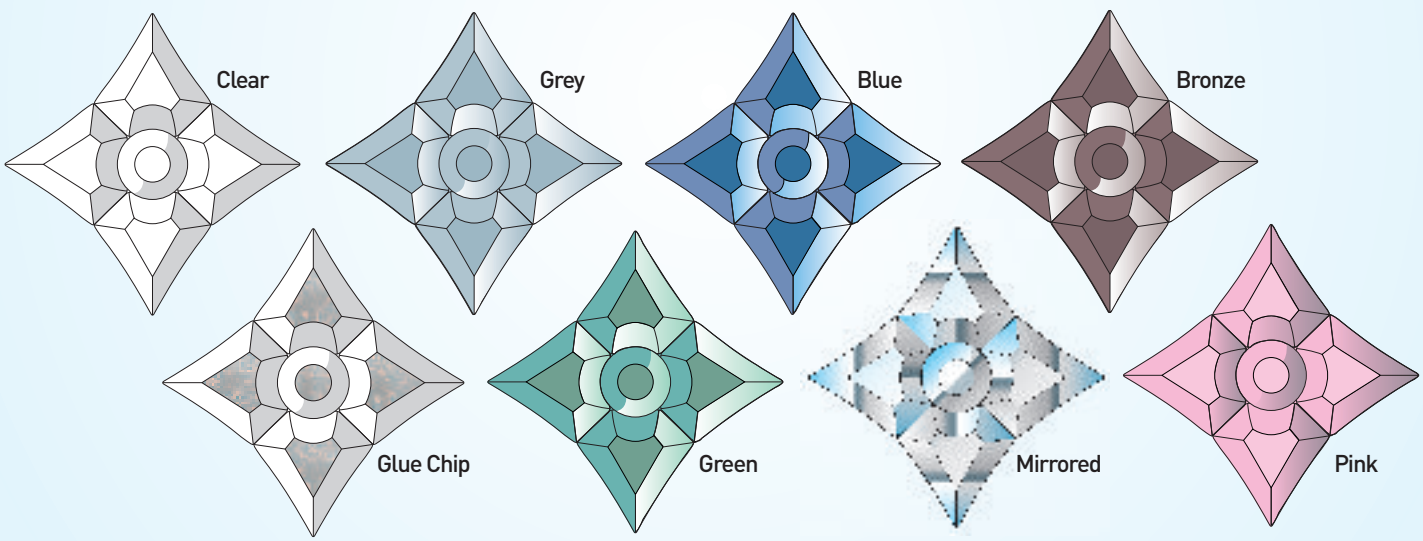
Our custom bevelling service means designs are no longer restricted by size, colour or existing bevel design. Customers can design their own bevels, have logos made or even alter the size or colour of any of our existing RegaBevel range.

Ideal for any bevelled window or door suppliers, from small studios to large contractors, any quantity of custom bevels can be supplied from one to thousands! Prices are based on the size and complexity of the design and each design is quoted individually.

Discover how the brilliance and beauty of hand-crafted, custom bevels can add an extra dimension to your designs.

Bevel Availability

Custom bevels are currently available in the following colours and textures:



Bevel Edges

The edge thickness of our 5mm bevels can be altered. Currently available are:

Standard Edge: This is the thickness of our standard bevels and is the best choice for use with our overlay system. Edges are between 1.5 and 1.8mm thick.

Thick Edge: This edge thickness is appropriate for use with traditional stained glass lead cames and is approximately 2.5mm thick.

Polished Edge: This highly polished edge is for use without lead.

How to order a Custom Bevel

Ordering a custom bevel is a simple process and can start with the most basic of drawings.

1. Send a sketch or design idea, with the dimensions and quantity required. It doesn't have to be an elaborate or expert drawing as we can use our design software to build a more detailed picture.

2. We'll create a design and liaise with you regarding any changes or specific requirements, such as colour or edge thickness of bevels.

3. Once the design is finalised, we will then make a sample of your bevel. It will take about 4 weeks from the finalisation of the design to when you receive your bevel.

4. If you are happy with your order, we can then make as many bevels of your design as you require. We can also provide a design template if necessary.

Pricing

Custom bevelling prices are individually calculated and are based on the size and complexity of your design. Each custom bevel quote is comprised of two elements:

A Set-Up Charge: For UK customers this flat rate charge of £35 covers everything associated with making a new bevel from scratch. This includes any design work, creating the factory template and shipping the bevels. The Set-Up Charge is a payable only once per design.

For customers outside of the UK, further shipping costs are payable in addition to the Set-Up Charge. Prices listed in Pounds sterling will be converted into US dollars or Euros using exchange rates on the day of order.

Bevel Costs: This is the cost of the bevelling and the glass. Size and complexity is taken into consideration at this point, and the cost is calculated using the same method as that used for standard bevels.

Consequently, larger quantity orders are more cost effective when using our custom bevelling service.

Showcase

Cinderella's Carriage,
Grand Floridian Hotel in Disney World, Florida

Adding a beautiful and individual touch, Cinderella's Carriage adorns the wedding chapel windows of the Grand Floridian Hotel in Disney World Florida. Through a creative collaboration, we were pleased to deliver this simple, yet striking feature, which adds a unique focus to the room.

The Designer Collection

A firmly established favourite with decorative glass studios, the RegaLead Designer Collection is a simple and innovative concept for creating imaginative bevel designs for windows, doors and fanlights. Using these 34 bevel shapes and the full-size positional templates that are available, an almost infinite number of design combinations can be created. Sizes are shown as the bevels are in position on the page and will vary depending on how the bevels are used in the design. With beautiful seamed or polished edges, the Designer Collection can be used without lead.
NOTE: All bevels in the Designer collection are supplied in packs of 10.

With almost limitless possibilities, it's difficult to know where to start. However, with the 'Beveldine' book it's simple - 58 pages packed with a huge library of multi-bevel designs, all of which can be achieved using the Designer Bevel Collection. From small and understated to large and intricate, the 'Beveldine' Book provides inspiration for a host of beautiful designs. It couldn't be easier, as each design features a list of the required bevels and the finished product dimensions. For a small selection of the most popular and easy to make designs from the Beveldine book, please see pages A62 - A63.

Glue Chip Door Bevels

RegaLead Glue Chip finish is created by employing the authentic age-old traditional technique of applying a strong glue coating to the surface of the glass and then removing it to leave the distinctive textured appearance.

Dichroic Door Bevels

Dichroic bevels are made by applying a special coating to the textured glass which reflects and refracts the light, changing colour when viewed at different angles. In reflected light, the Dichroic glass shows yellow, moving through to pink, purple and blue in transmitted light.

NOTE: Due to the nature of the glass and the limitations of the printing process, the colours shown can not be regarded as completely accurate representations and are intended as a guide only.

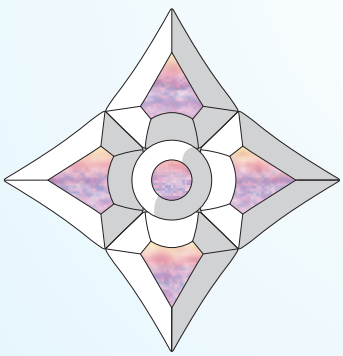
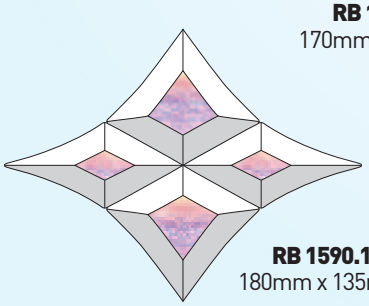
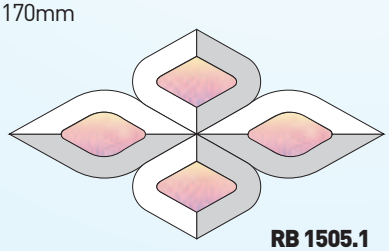
Dichroic Fanlight Bevels



RB 1592.1
170mm x 170mm

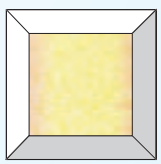


RB 1590.1
180mm x 135mm

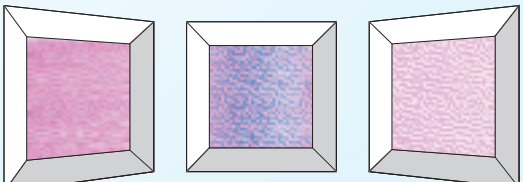


RB 1505.1
191mm x 114mm

Dichroic bevels are made by applying a special coating to the textured glass which reflects and refracts the light, changing colour when viewed at different angles. In reflected light, the Dichroic glass shows yellow, moving through to pink, purple and blue in transmitted light.



Reflected Light



Transmitted Light

NOTE: Due to the nature of the glass and the limitations of the printing process, the colours shown can not be regarded as completely accurate representations and are intended as a guide only.

Roundels

Roundels are a common feature in Victorian and Edwardian glass designs and until now, it has not been possible to include these elements into Decorative Overlay glass panels. With our new manufacturing technique, we can now offer the beauty of these 60mm diameter Roundels with the practicality of smooth backs making them ideal for bonding with UV adhesives.

BEVEL BONDING

Considered the most successful and advanced method of bonding bevels to glass surfaces, the UV-Tek system uses either UV or Visible light to produce an ultra-fast cure. Developed by UV-Tek, in conjunction with RegaLead, this system ensures the highest quality bevel bond by curing from underneath and gives a fast, accurate and safe bond every time.

Intro to Bevel Bonding

For over 10 years, RegaLead and UV-Tek have worked in partnership to supply the best adhesives and equipment for the bonding of glass bevels. With over 1000 curing units sold worldwide and in excess of 6 million bevel pieces successfully bonded in the last 10 years, UV-Tek is the market leader in its field.

While there are hundreds of UV adhesives available in the market today, UV-Tek is unique as it was developed with just one application in mind – bonding bevels. During the development stage, the UV-Tek team worked closely with RegaLead in order to understand our customer requirements and the problems they had encountered. This collaboration lead to the launch of the UV-Tek system – the first to combine adhesives and equipment, perfectly designed to work with each other.

The UV-Tek system is based around an ultra-fast cure UV adhesive with a unique formula and is supported by a CE-approved lightbox curing unit with bespoke templates and accessories. However, what makes it so special is down to two factors: controlled timings and curing from below.

Other systems which rely on above-cure, hand-help lamps have many problems over time with thoroughness and consistency of the cure. This is because curing from above with a hand-held lamp causes an uneven distribution of the UV rays as a result of light refraction through the bevel (see Diagram 1). Ultimately this leads to stresses in the bond line and causes weakness over time. Furthermore, hand-held lamps provide little control over how far the UV light source is from the bond line. As UV light is shortwave – and is very powerful across a short distance – these variations in the distance between the lamp and the adhesive can have major effects on the performance of the adhesive.

However, with the UV-Tek system, consistency of cure is guaranteed as the below-cure ensures there is no interference from refraction (see Diagram 2). Additionally, with the below-cure, the distance to the adhesive is always the same and, as all our luminaries are fitted with electronic timers, the exact amount of UV exposure is guaranteed.

The UV-Tek system is perfect for bonding Fusion Tiles. As the tiles are made from various glass colours, they will transmit UV light at dramatically different rates, or not at all in the case of opaque colours. Therefore, the only way to ensure a good bond is with the UV-Tek system that works from underneath.

The system has been weather and time tested both in the UK and Australia where UV-Tek cure bonded bevel assemblies withstood more than 1000 hours with zero failures when tested to ASTM G53-94 standards.

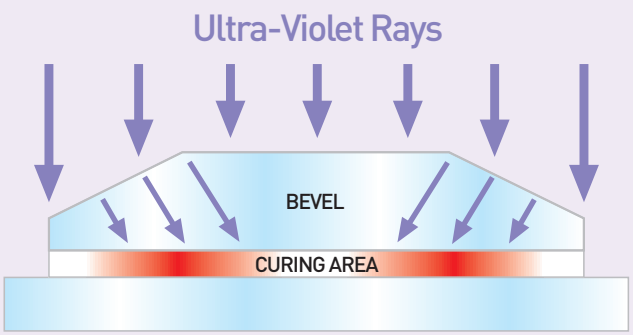

Diagram 1: **HAND-HELD LAMP**

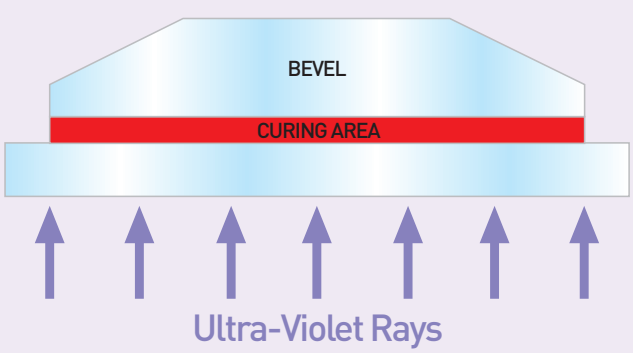

Diagram 2: **UV-TEK EQUIPMENT**

Adhesive Range

In addition to our flagship UV-Tek range of adhesives, we supply two further, more economical ranges – RegaBond and GlassMaster. With a variety of different properties and application purposes, our three ranges of adhesive cover every possible requirement.

UV-Tek

Developed in conjunction with UV-Tek, this range features, amongst others, the original UV-Tek product, UV116, and UV-Tek's revolutionary rapid cure adhesive, FC700. The majority of the adhesives in this range rely on a UV cure, but visible light bonding is possible with VIS410, demonstrating the flexibility of the UV-Tek system.

RegaBond

Our economical, own-branded range of adhesives caters to a wide selection of applications and requirements. Featuring different viscosity adhesives, as well as a visible light option, RegaBond adhesives are the lower cost method of creating a strong and durable bond.

GlassMaster

The latest addition to the bevel bonding range is our GlassMaster selection of adhesives. These include five different adhesives of varying viscosity levels with options for visible and UV curing. Unlike the other two ranges, GlassMaster adhesives are available in up to 5 litre bottles and with the option of own-label packaging (minimum volumes apply).

Speciality Adhesives

In addition to our extensive range of Bevel Bonding adhesives, we offer two highly specialist adhesives for the bonding of small fused glass tiles and our Inox Elements products.

Inox

Our Inox adhesive is designed as a low viscosity, wet wipe adhesive for bonding the small stainless steel elements to a glass surface. The adhesive is designed to leave a liquid excess after initial curing which can be easily removed and cleaned off without damaging the finely textured surface of the Inox Elements.

Please note that Inox adhesive is designed for bonding light weight stainless steel elements and is NOT suitable for bonding heavy metal objects or where a load bearing adhesive is required. Inox Elements need to be bonded from underneath using UV-Tek equipment.

Fusion

Our specially formulated adhesive for bonding Fusion tiles has added flexibility to allow for the slightly irregular glass surface on the back of the tiles. It is recommended that at least 1mm thickness of adhesive is left on the bond line after application to avoid the possibility of Fusion tiles cracking with movement in the glass substrate.

Please note Fusion tiles should always be bonded with Fusion adhesive and from below with UV Tek luminaires as the opacity of the fused glass surface will restrict uv exposure when curing from above

Adhesive Selector

With our colour-coded chart, it's quick and easy to compare across our selection of adhesives:

	UV-Tek UV116	UV-Tek FC700	UV-Tek VIS410	UV-Tek UV108	RegaBond MV	RegaBond LV	RegaBond Visible
Light	UV	UV	Visible	UV	UV and Visible	UV and Visible	Visible
Viscosity	Medium	Low	Very Low	Medium	Medium	Low	Low
Curing	**30 seconds** 2 x 15 second exposures	**10 – 14 seconds depending on luminaire** 2 x 5-7 second exposures	**30 seconds** 2 x 15 second exposures	**30 seconds** 2 x 15 second exposures	**UV: 30 seconds** 2 x 15 second exposures **Visible: 90 seconds** 2 x 45 second exposures	**UV: 30 seconds** 2 x 15 second exposures) **Visible: 90 seconds** 2 x 45 second exposures	**Laminated Glass: 15-30 seconds depending on thickness** 1 x 15-30 second exposures **Toughened/Float Glass: 30 seconds** 2 x 15 second exposures

UV-Tek Luminaries and Equipment

Our selection of UV-Tek luminaries are all fitted with fully digital controls and timers, ensuring an even and consistent cure every time. UV-Tek is exclusively available through RegaLead and its distributors and is firmly established as the leading bevel bonding system on the market today.

FSU Elite

Free Standing Unit
A variable timed exposure unit designed for curing adhesives using UV light. It features separate background lighting for film work and a remote switch for use with the slider rail. Ideal for large bevels.
Curing area approx: 410 x 1220mm | **Dimensions:** 1830 x 600 x 110mm
Working height: 900mm | **Product Code: RFSUELITE**

Extension Cradle for FSU Elite

Easy to fit, detachable Glass Support Extension Cradle allows safe handling of large sheets of glass up to 2m wide and 1.2m deep (4mm glass) for bevel bonding. Two additional rails hold the glass in place. The Support Rail measures 1.9m wide x 1m deep. Can only be used on latest FSU Elite units (with digital timer and remote).
Product Code: RUVCRADLE

BTU Elite

Bench Top Unit
A variable timed exposure unit designed for curing adhesives using UV light. It features separate background lighting for film work.
Curing area approx: 410 x 455mm
Dimensions: 780 x 600 x 110mm
Product Code: RBTUELITE

DTU 150

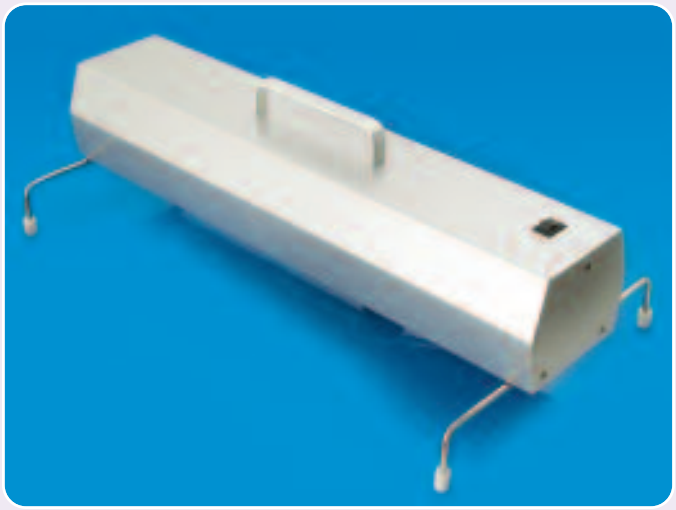
Desk Top Unit
A variable timed exposure unit designed for curing adhesives using UV light. Ideal for fanlights and cabinet work.
Curing area approx: 455 x 215mm
Dimensions: 680 x 380 x 60mm
Product Code: RDTU150

PCU Adaptor

Transforms 110V power supply to 240V UK supply. Required for customers in USA, Canada, Japan and some central American countries.
Product Code: RUVPCU

RegaBond Luminaries and Equipment

Although we recommend UV-Tek equipment for curing from below, we also offer a range of hand-held lamps for customers who are looking for a low-cost option to bevel bonding.



Large 30W Lamp

2 x 15 watt tubes. Top handles for easy movement, detachable legs for easy positioning and simple on/off switch.
Curing area approx: 400 x 90mm | **Dimensions:** 510 x 120 x 120mm
Product Code: REXPLAMP30W

Small 12W Lamp

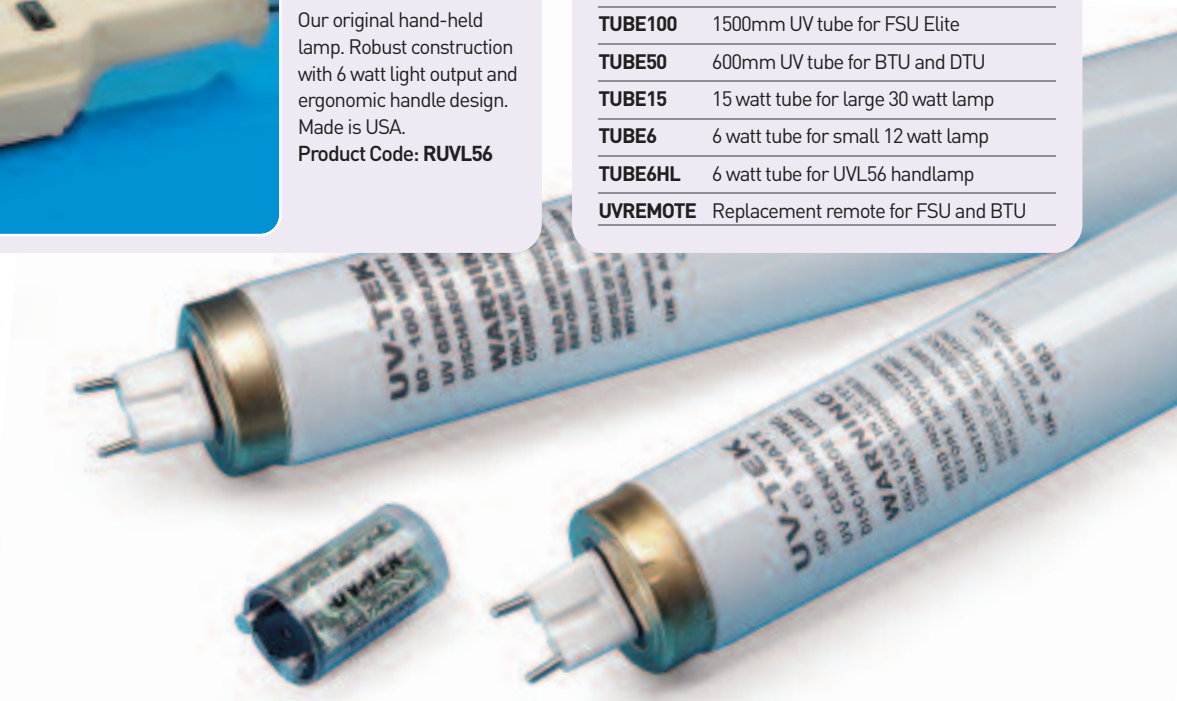
2 x 6 watt tubes. Top handles for easy movement, detachable legs for easy positioning and simple on/off switch.
Curing area approx: 160 x 75mm | **Dimensions:** 210 x 100 x 70mm
Product Code: REXPLAMP

UVL 56 Hand Lamp

Our original hand-held lamp. Robust construction with 6 watt light output and ergonomic handle design. Made is USA.
Product Code: RUVL56

Replacement Parts for Luminaires

UVSTART	Starter motor for UV-Tek lamps
TUBE100	1500mm UV tube for FSU Elite
TUBE50	600mm UV tube for BTU and DTU
TUBE15	15 watt tube for large 30 watt lamp
TUBE6	6 watt tube for small 12 watt lamp
TUBE6HL	6 watt tube for UVL56 handlamp
UVREMOTE	Replacement remote for FSU and BTU



Bevel Adhesive Testing

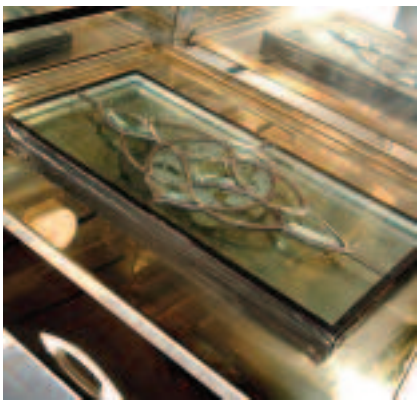
Our bevel adhesives are all designed for outdoor applications and need to withstand the huge variations in temperature and climatic conditions that our worldwide customer base will encounter. When used in conjunction with insulated glass, further stresses are put on the adhesives as the glass surface flexes with the changing air pressure and heat. All our products are put through the same rigorous test procedures and we can confidently offer a 10 year warranty.

Snap Test on Float Glass

A 38mm square Bevel is bonded on to a 4mm float glass strip, and then flexed over a 15mm pivot until the glass breaks. The adhesive only passes if the bevel remains intact with no sign of delamination at all being in evidence.

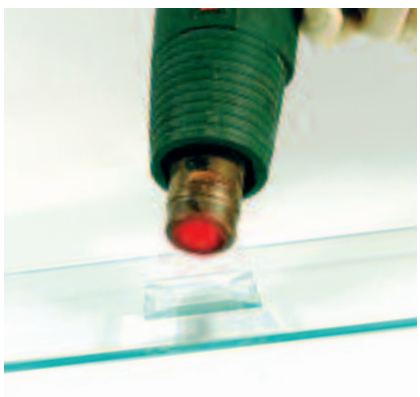
Flex Test on Toughened Glass

A 51mm bevel is bonded centrally on to a toughened glass pane. The glass is then flexed over a 15mm pivot until the glass touches the table on both sides of the pivot. The adhesive only passes if the bevel remains intact and there is no sign of de-lamination at all being in evidence.



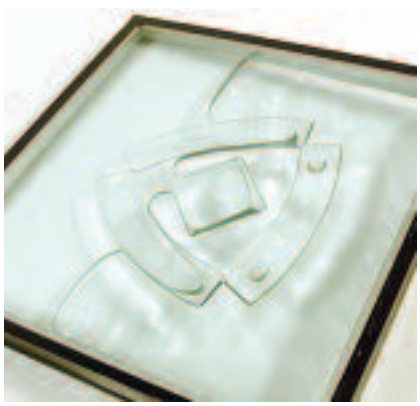
Humidity Test

A bevel design is bonded on to a pane of float glass and placed in a humidity chamber set at 38 degrees Celsius, 95% Relative Humidity for a period of 2 weeks. The bonded bevel is inspected for water vapour penetration.



Heat Resistance

The bevelled glass from the Flex Test on toughened glass is placed on to a wooden frame with the bevel facing downwards. A heat gun is placed less than 10mm from the glass and turned on to full heat. The adhesive will only pass this test if the bevel remains intact for more than 5 minutes.



Deluge Test

A bevel design is bonded on to a pane of float glass and placed in a deluge chamber with the water set at 65 degrees Celsius. A full cycle takes 2 hours, and the adhesive will only pass this test if there is no sign of delamination after a minimum of 3 continuous cycles.

Clarity of Bevels

A bevel design is bonded to a pane of float glass and the unit left in sunlight for 2 hours to photo-bleach. The adhesive will only pass this test if the bevel is optically clear to the naked eye.

RegaLead®

TOOLS & ACCESSORIES

The definite collection of tools and accessories necessary for every decorative overlay project. Included in the range are application tools for lead, film and bevel work, cleaning and finishing products and soldering tools.

Cleaning & Finishing

RegaSheen Original

Water based chemical, used to create an aged effect on natural lead profiles.
250ml: **RCAF01**
5 litres: **RCAF02**

RegaSheen Plus

Similar to RegaSheen original, but produces a darker effect.
250ml: **RCAF03A**
5 litres: **RCAF04A**

Patination Oil

Apply to fresh, natural lead to provide a protective film which prevents uneven oxidation.
250ml: **RCAF05**

Bevel UV Adhesive Remover

Iso-proponal based cleaner for removing excess bevel UV adhesive after curing.
1 Litre: **RCAF06**
5 Litres: **RCAF16**

Lead Adhesive Cleaner

Solvent cleaner to remove excess pressure sensitive adhesive from glass after lead application.
250ml: **RCAF07**

UV-Tek Glass Cleaner

Aerosol foaming glass cleaner which is smear-free and compatible with UV curing adhesives. 12 per carton
600ml: **RCAF08**

Wire Wool

Fine grade to remove contamination from glass panels with minimum risk of causing surface damage.
1lb: **RCAF12**

Boss Wipes

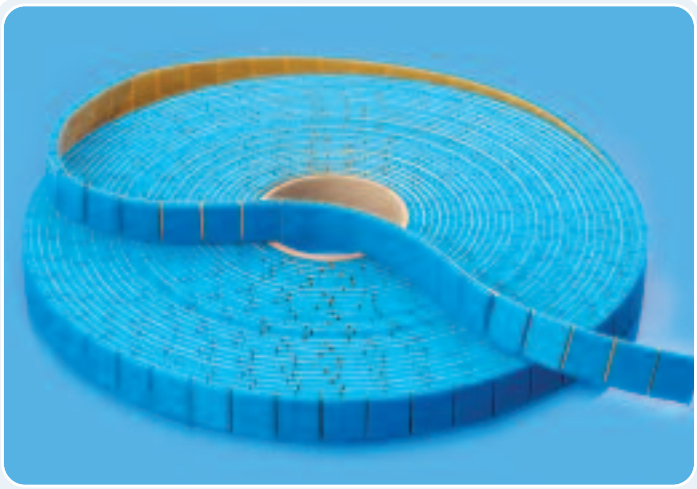
High-quality, lint-free paper towels supplied in a box dispenser.
Towel size: 255 x 395mm
400 sheets: **RCAF17**

RegaClean No.1

Specially formulated using Isoproponal for preparation of glass before applying overlay products.
Trigger Spray Bottle (500ml): **RCAF14**
Plastic Container (5 litres): **RCAF15**

Polish and Protect

Wax-based, low abrasive polish and restorer that will bring lead to a brilliant shine and remove surface dirt and small amounts of lead oxide. The 'waxy' residue will give short term protection from tarnishing.
250ml: **RCAF21**



Blue Transport Pads

High-density foam, single-sided adhesive, blue transport pads for glass.
Size: 19 x 23mm. **1000 per roll: RGLASSPAD**

Application Tools and Materials

Lead Roller

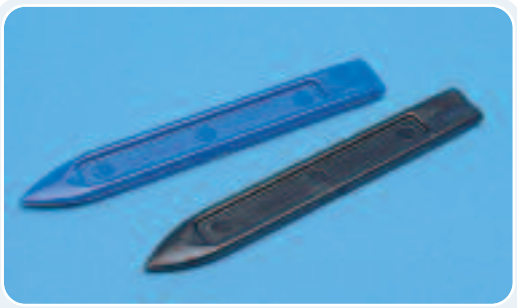
The perfect tool to ensure lead profiles have maximum adhesion to glass.
65mm: **RATM01** | 50mm: **RATM02**

Film Rollers

150mm hard rubber roller and 75mm soft rubber roller for film application.
150mm: **RATM05** | 75mm: **RATM06**

Film Application Solution

Iso-proponal/water based solution to enable fault-free application of films.
1 litre: **RATM09**



DIY Boning Peg

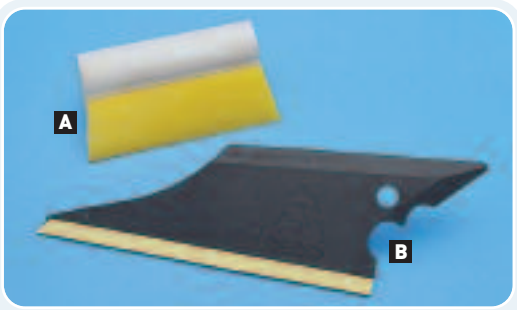
Finishing tool for lead profiles, to seal the edge and crimp at crossovers.
RATM03

Teflon Boning Peg

Our professional grade boning tool can be re-sharpened and is a must for the professional Overlay artist.
RATM19

Heavy Duty Craft Knife and Blades

High quality scalpel knife for accurate cutting of films.
Knife: **RATM12**
Blades (5 pack): **RATM13**

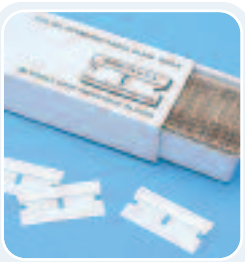


Film Applicators

Turbo Pro for small film pieces. Hard edge for larger areas.
A Turbo Pro: **RATM08**
B Hard Edge: **RATM07**

Combination Tool

A fantastic roller and film applicator in one. The 6" wide hard applicator is ideal for laying both Stained Glass Art Film and CadBlast vinyl. **RATM22**

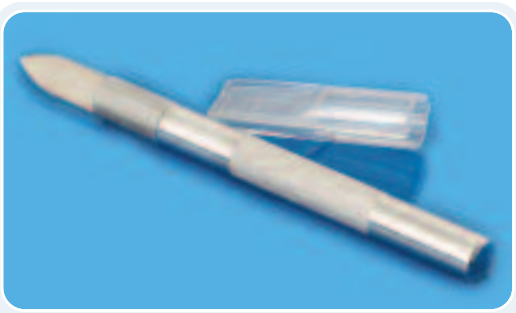


Safety Blades

General purpose, single-edged safety blades for trimming lead, film and removal of adhesives.
100 per box: **RATM10**

Safety Blade Holder

Neat holder to ensure safer use of single-edged blades.
RATM11



UV-Tek Superknife

Double-edge knife, perfect for removing excess adhesive between bevels. Features changeable blades.
Knife: **RUVSKNIFE** | Blades (10 pack): **RUVSKBL10**

Trim Tool and Blades

Removes excess paint, stickers and adhesive from windows.
Trim Tool: **RATM16**
Trim Tool Blades (5 pack): **RATM15**

Soldering Equipment and Accessories

Weller Soldering Iron

100 watt, temperature-controlled, professional, multi-purpose soldering iron for fast soldering of all types of decorative glass leadwork.
RSOL01

Soldering Iron Stand

For resting the soldering iron, includes built-in sponge tray.
RSOL02

Soldering Tips

7mm wide for general use.
4mm wide for more detailed work.
7mm: RSOL03
4mm: RSOL04

Sal Ammoniac Tinning Block

For cleaning and tinning soldering iron tips.
RSOL05

Powerflow Flux

Paste flux for use with solder.
350g: RSOL06

Bakers No.3 Flux

Liquid flux, easy clean, for use with solder.
250ml: RSOL07

Solder

60% tin/40% lead solder. The higher tin content allows the solder to flow easier and gives a cleaner looking joint.
1kg/18 Sticks: RSOL08

Fume Trap

The Fume Trap™ provides a safe soldering environment by drawing fumes away for the person soldering and traps them in a disposable activated carbon filter.
Fume Trap: RSOL09
Replacement Filter: RSOL10

Designer Glass Clips

Window Glazing Clip

For installation of glass in front of existing glazing. Up to 6mm glass thickness. Packed in 25s.
RATM20

Cabinet Glazing Clip

For flush fitting of glass into up to 12mm in recessed cabinet glazing. Packed in 50s.

RATM21

PPE

UV Goggles

UV protective goggles for use when working with UVTek and RegaBond bonding equipment.
RUVSPECS

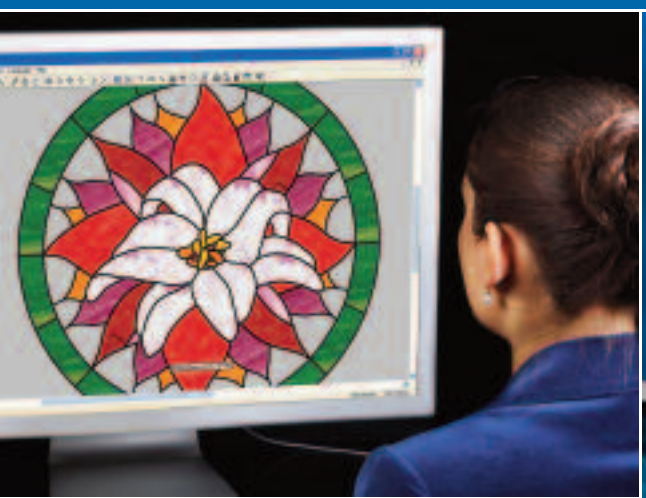
Latex Gloves 100 Box

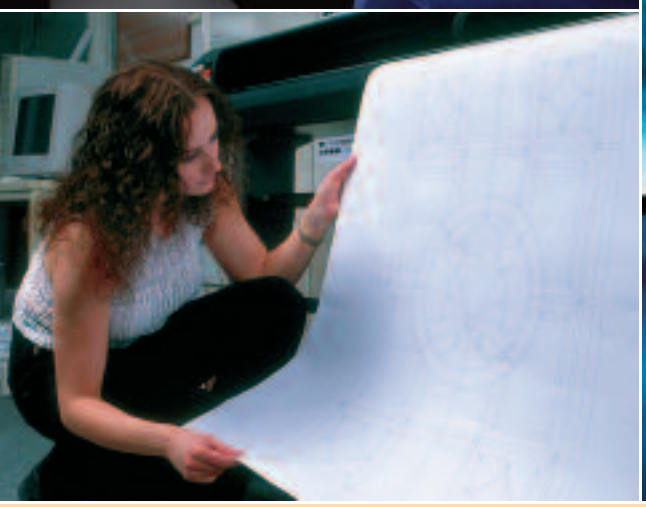
Powder free, high-quality, latex gloves to protect against chemicals, adhesives and solvents.
Medium: RCAF10 | Large: RCAF11

RegaLead®

SOFTWARE SOLUTIONS

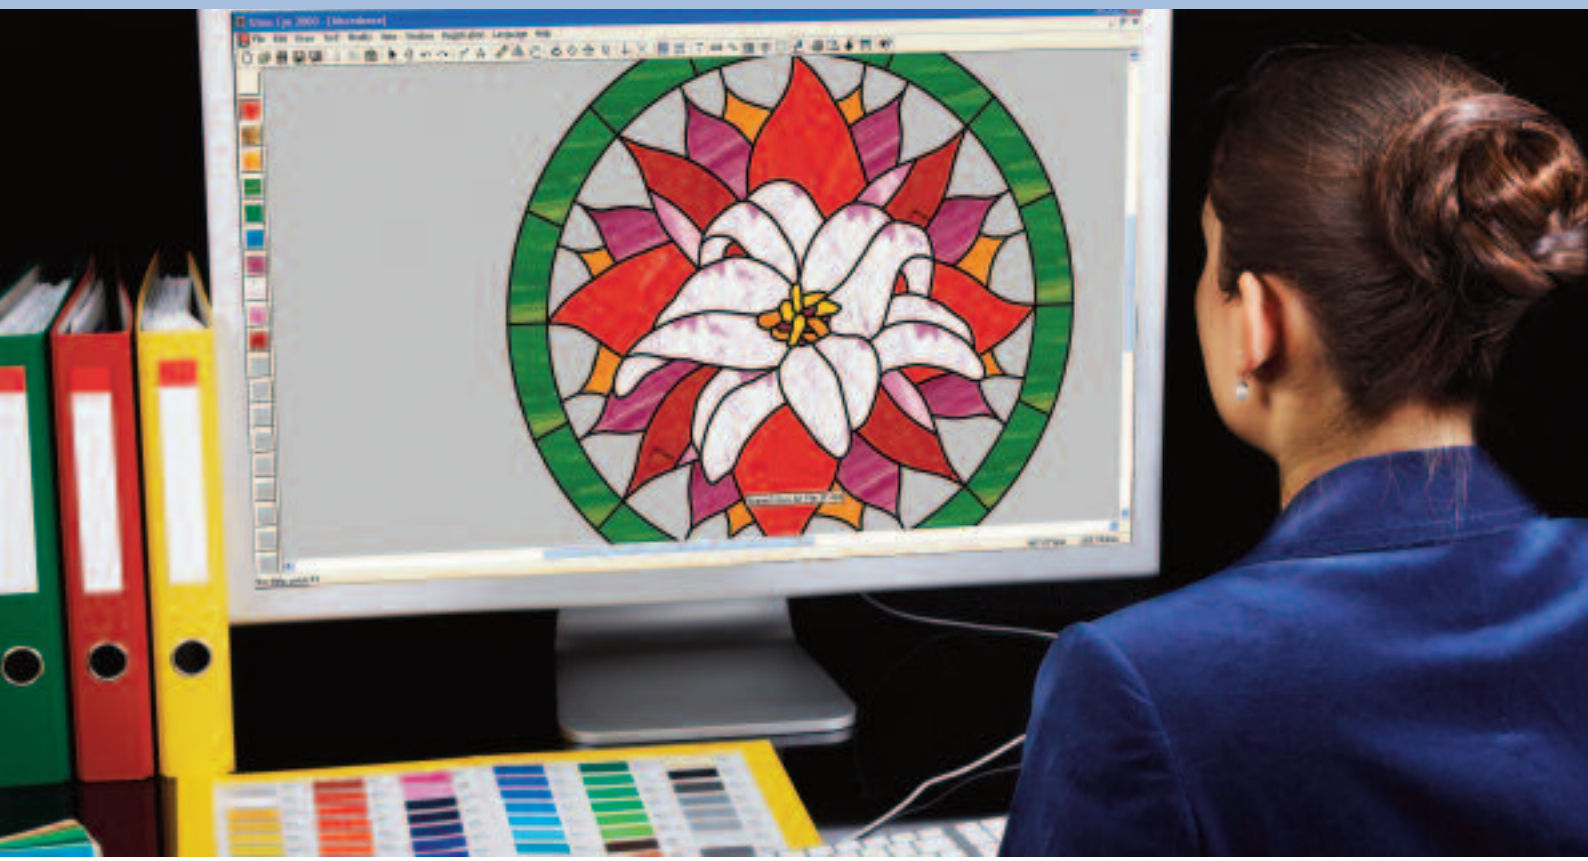
The definite collection of tools and accessories necessary for every decorative overlay project. Included in the range are application tools for lead, film and bevel work, cleaning and finishing products and soldering tools.

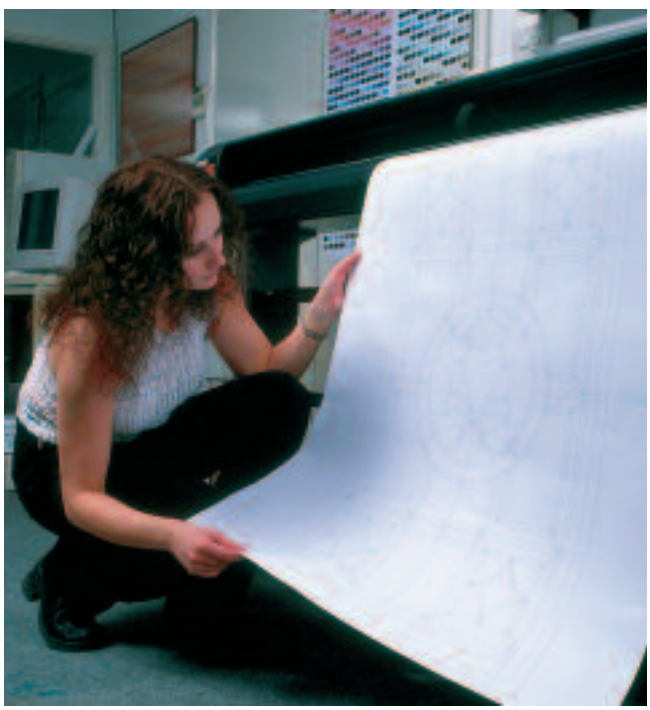




Introduction

RegaLead can offer the complete solution for decorative glass designs. Our fully integrated system combines drawing software, with computerised plotting and cutting equipment, making it easy to create beautiful designs for stained glass, overlay and sandblasting.





We're pleased to provide a choice of two software packages, GlassEye and WinPCSign Pro, each with unique features suited to different decorative requirements. Both packages benefit from a range of advanced functions, designed to optimise production efficiency and improve design flexibility. Complementing design CDs are available for both GlassEye and WinPCSign Pro, which drastically expands the vast design libraries that are a feature of the software packages.

Translating a design on our software to a design on glass couldn't be easier. A feature of our advanced software package allows images to be exported directly to our plotting and cutting equipment. We have two ranges of plotting and cutting equipment, our APD plotters and our more economical CadBlast plotters, which come in a selection of sizes to suit specific decorative needs.

Creating beautiful decorative designs could not be easier with our simple and cost-effective design system!

Software Design Solutions

Developed in conjunction with the specialist software house Dragonfly, GlassEye is the ultimate design, production and sales tool. Popular with both large and small studios worldwide, GlassEye software provides the key competitive advantage in the decorative glass market.

GlassEye is based on a CAD drawing system and benefits from a host of built-in features, including huge libraries of stained glass colours, RegaBevels and hundreds of leaded glass designs. We offer a variety of ways to expand these fantastic features, including free library updates with the release of new overlay products and a large selection of design CDs. While adapted to suit the requirements of the Overlay market, GlassEye can also be used as a design tool for sandblasting and traditional leaded panels.

GlassEye - Technical Support

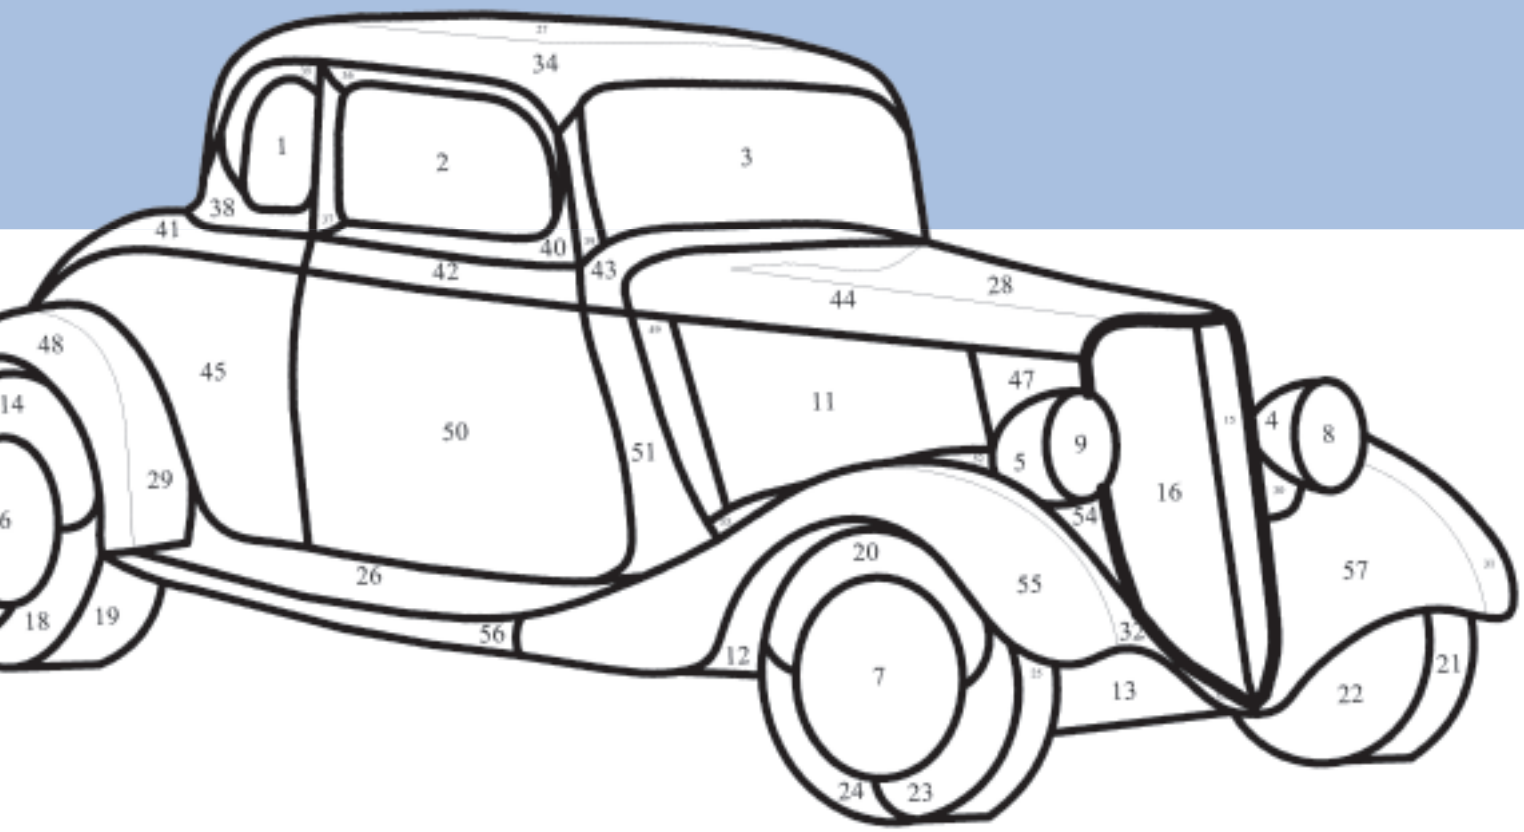
Training and Assistance: An extensive user's manual is provided with each edition of the software, which contains a step-by-step design tutorial and training video. On-site training and assistance is available for UK and Irish customers.

Additional Licenses and Upgrades: All GlassEye editions are licensed to run on an individual PC (or Mac). Professional and Professional Plus operate on license keys and Enterprise operates on a hardware key. Additional licenses and hardware keys can be purchased to run the software on an additional PC. Additional Enterprise keys are available from Dragonfly Software.

Upgrades between GlassEye editions are available, as is a free 30 day trial of GlassEye Professional.

There are three editions of GlassEye to choose from - Professional, Professional Plus and Enterprise:

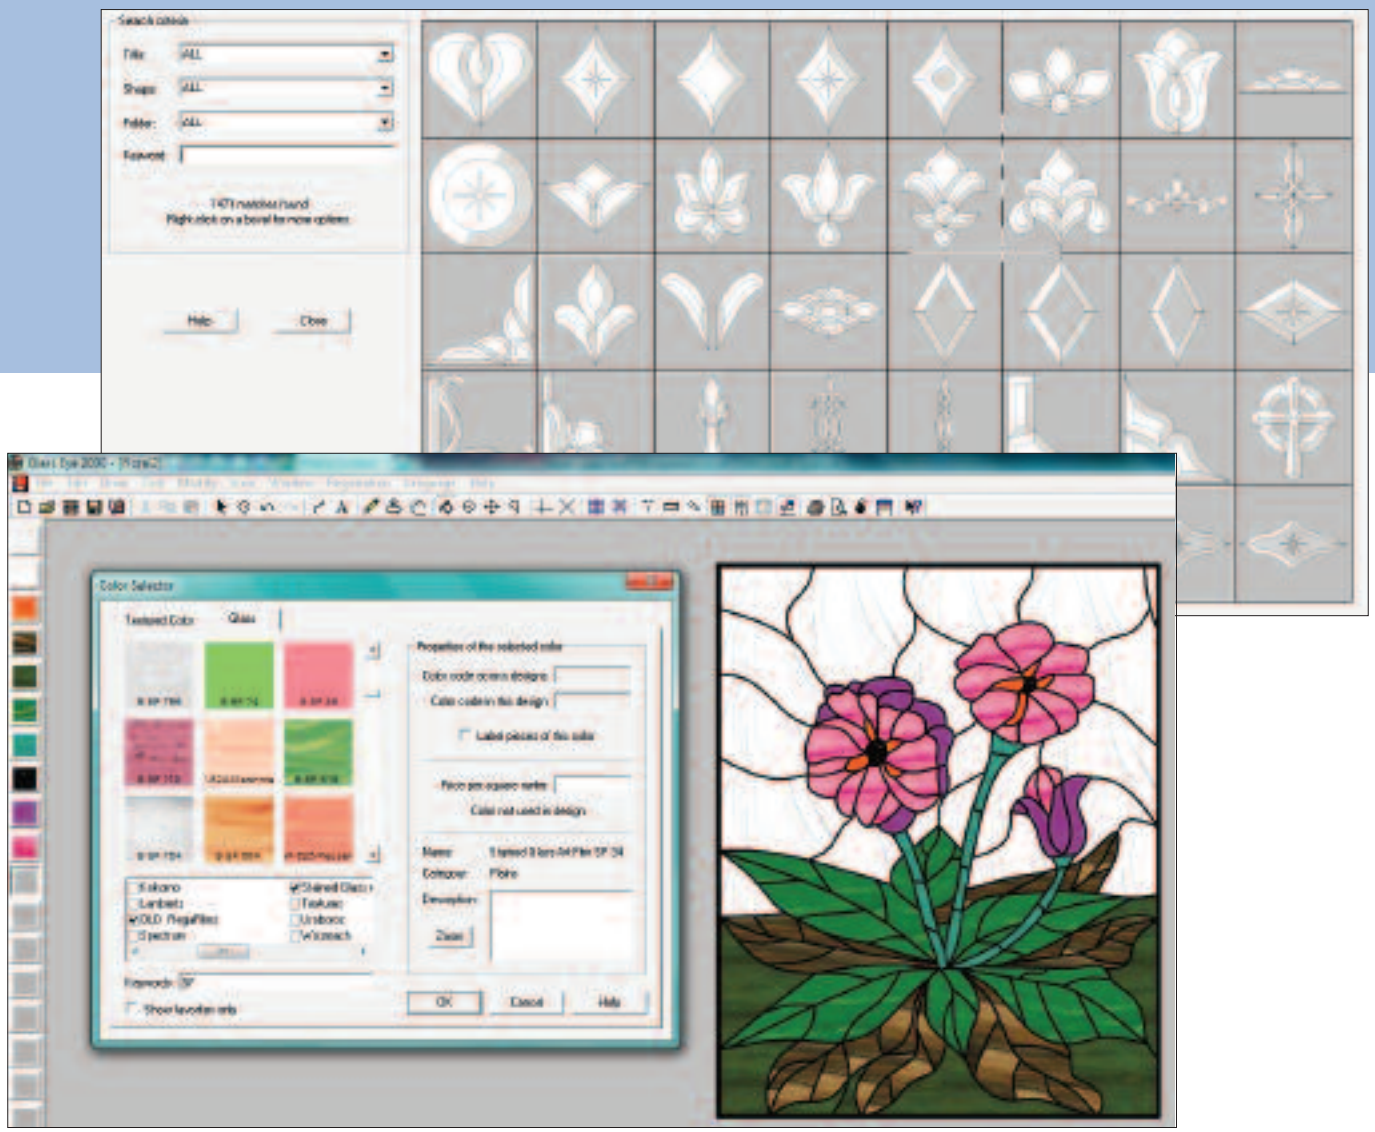
GlassEye Professional Edition



Library Features

Design Library: GlassEye comes with over 400 pre-drawn and coloured overlay designs from some of the world's leading stained glass designers, which are ready for use or easily editable using the simple drawing and design tools. All the RegaLead Fanlight and Door designs are supplied on a CD to expand the design library and are updated regularly free of charge.

Bevel and Fusion Library: GlassEye features a library of over 700 bevels, which includes all the latest bevels, drawn to size and ready to use, and the Fusion and Fusion Lite ranges. The bevel library is updated free of charge whenever a new RegaBevel brochure is launched.



Stained Glass Art Film Library: GlassEye's colour selector function allows designs to be created using solid colours or real representations of glass or film. Most of the ranges by the major US glass factories are included in the extensive library. The full colour range of RegaLead Stained Glass Art Film is supplied on CD to expand the pre-loaded colour library.

Additional Tools

Importing Designs: Images can be imported in a variety of ways to aid the creation of original designs, including from a digital camera, JPEG and BMP files, or scanned from a photograph or book.

Drawing Designs: Drawing tools and design aids make creating shapes and arcs easy, while rotating, reflecting, erasing, copying, repeating and re-sizing images is fast and simple.

Adding Text: Each piece of glass and film can be automatically labelled by colour or location when selected, and additional notes can be added anywhere on the design e.g. customer details or production notes.

Spectrum Glass

Armstrong glass Company

UROBOROS GLASS

KOKOMO OPALESCENT GLASS

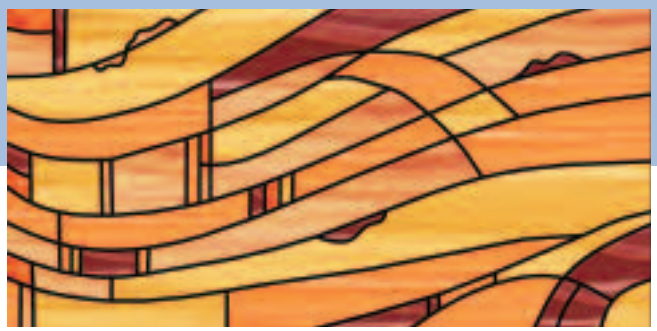
Bullseye

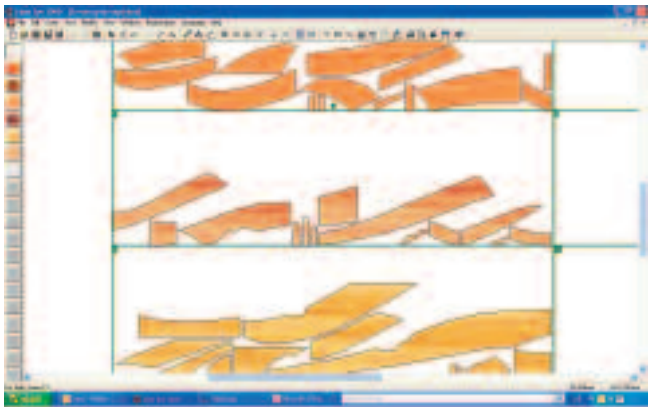
Costing and Usage: As a function of GlassEye, the Properties File can calculate glass, film and lead usage, material costs, wastage and profit. This information can be printed as a notepad.

Printing: Designs can be easily set to print in a variety of ways including A4 or full size, in colour or line only and labelled or unlabelled. Prints can also be scaled.

Exporting Designs: Designs can be exported in many file formats as GlassEye supports JPEG, TIFF, BMP and DXF amongst others. Image resolution can be varied for exporting files.

GlassEye Professional Plus and Enterprise Editions





GlassEye - Professional Plus Edition

Professional Plus has all the features of the Professional Edition with several additional functions:

Auto Trace: Professional Plus will automatically trace and convert any scanned or imported line drawings into a GlassEye drawing. Additionally, text will also be converted to lines allowing it to be coloured.

Display Measurements: Height, radius and angle size can be displayed during drawing, as well as keyboard entry of locations and sizes.

Tailor-made Shortcuts: Shortcut menu can be customised

Import Facilities: Vector files, such as DXF, DWG, EMF and WMF, can be imported for compatibility with AutoCAD and CorelDraw.

GlassEye - Enterprise Edition

Enterprise Edition benefits from all the features of Professional and Professional Plus, in addition to several more advanced functions:

Integrated System: Enterprise has the facility to output designs to plotting and cutting devices, enabling Stained Glass Art Film, signwriting materials and sandblast resists to be cut on a plotter. This is achieved by adding HP-GL or DP/PL support to GlassEye files.

Plotting: Designs can be separated into individual pieces and grouped by colour for plotting. Pieces can be automatically grouped (nested) tightly, loosely or not at all. Grouped pieces can be re-arranged manually to optimise material usage and rotated to follow the grain or pattern direction of material.

See pages **A160 - A161** for Plotter Solutions

Exporting Files: Designs can be exported in DXF, DWG, EMF and WMF formats.

Our integrated system, comprising software and plotting equipment, makes design for decorative glass overlay, traditional stained glass and fusing simple.

	Professional Edition	Professional Plus Edition	Enterprise Edition
Straight lines, curves, and arcs; elliptical and polygonal shapes	■	■	■
Resize, offset, rotate, scale, stretch, nudge, flip, and reflect	■	■	■

Design CDs: Overlay and Stained Glass

We offer a large selection of CDs containing hundreds of stained glass and overlay designs for use with GlassEye software. These beautiful designs can be used as they are, or reformatted using the extensive colour and bevel libraries available on GlassEye. Designs are in .eye / .jpg / .tif formats.

Paned Expressions

Paned Expressions Studios have been established as one of the top design studios in the USA for many years and have a large collection of design CDs, containing hundreds of stained and overlay glass designs, for use with the GlassEye software.

Our Favourite Patterns

Over 100 designs from Nature & Animals to Fantasy & Flowers.

Product Code: **RPEXCDFAV**

In Full Bloom 1

Over 80 patterns. Everything blooming in entryways, firescreens, fanlamps, lanterns and panels.

Product Code: **RPEXCDBLM**

In Full Bloom 2

Over 70 beautifully detailed floral designs.

Product Code: **RPEXCDBLM2**

Tradition

Over 100 patterns from Victorian, Art Nouveau, Art Deco, Arts and Crafts to Tiffany and Prairie designs.

Product Code: **RPEXCDTRAD**

Water, Water Everywhere

Over 70 patterns for fish, shells, beaches, dolphins, waterfalls and river life.

Product Code: **RPEXCDWAT**

Into Africa

Everything African. Wild animals, tribal life, fantastic landscapes. Over 80 patterns. The first of its kind.

Product Code: **RPEXCDAFR**

Nature's Bounty 1

Over 100 patterns of animals, landscapes, seascapes, everything Mother Nature gives in abundance.

Product Code: **RPEXCDBTY**

Screen Gems

Over 80 patterns for room dividers, privacy screens and fireplace screens.

Product Code: **RPEXCDGEM**

Orient Expressions

Over 70 patterns for oriental inspired designs - birds, trees and flowers, mountains and people.

Product Code: **RPEXCDOR**

Mirror Image

Over 90 mirror patterns of various shapes and sizes from modern to contemporary designs.

Product Code: **RPEXCDMIR**

From Russia with Love

More than 70 patterns designed in Russia for floral, abstract, classical, geometric and traditional patterns.

Product Code: **RPEXCDRUSSIA**

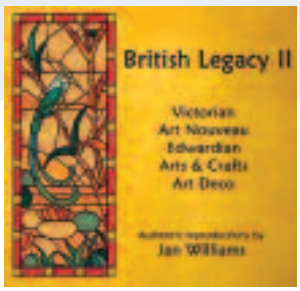
British Legacy

Compatible with GlassEye, these beautiful patterns in this collection are historically accurate representations of 19th and 20th century European stained glass windows.

British Legacy 1

This unparalleled compilation features 76 designs originally created between 1840 and 1925. included are several unique period designs such as a dramatic Galleon design from 1902, a Deco landscape, a highly detailed peacock with over 325 pieces and a fantastic Chinese dragon.

Product Code: **RDFLYCDBL1**



British Legacy 2

Includes a variety of sailing vessels, landscapes, birds and windmills accompanied by heraldic shields and elegant traditional Victorian, Edwardian, Art Nouveau, Art Deco and British Arts andCrafts motifs.

Product Code: **RDFLYCDBL2**

British Legacy 3

76 designs taken from original windows in churches, businesses, and private homes. Included are knights in armour, classic shields of heraldry, a dozen magnificent Mackintosh rose patterns, some stunning flower trellises and traditional period designs from the Victorian and Edwardian eras.

Product Code: **RDFLYCDBL3**

Pure Fantasy

Over 50 patterns of Dragons, Wizards, Trolls, Fairies, Gnomes. A complete collection of fantastic creatures.

Product Code: **RPEXCDFAN**

West by SouthWest

Much requested collection of Indian design and Western themed patterns. Over 80 patterns included.

Product Code: **RPEXCDWST**

Oceans and Islands

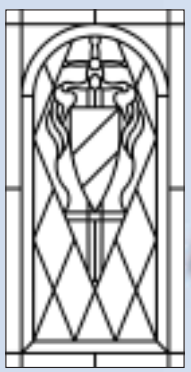
Over 60 patterns - all tropical beauties. Florals, Island Scenes, under the water and on the water

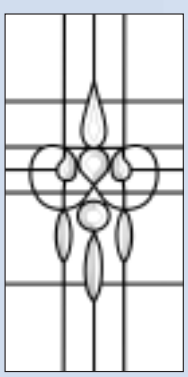
Product Code: **RPEXCDOCE**

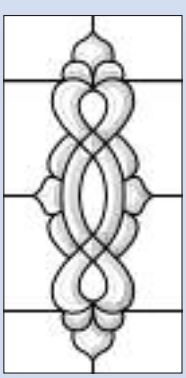
Cabinet Designs

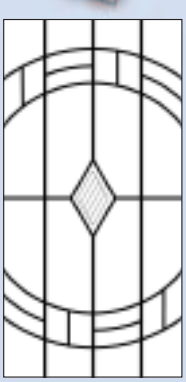
Much requested collection of over 80 Indian design and Western themed patterns.

CD & Book: **RBROCDCD**
Book Only: **RBROCAB**









Additional Design CDs

Japanese Style

60 colourful Japanese designs of landscapes, samurai warriors, geishas, pagodas, bamboos, blossoms and other flowers.

Product Code: **RVITCDJAP**

Decorative Options

All the designs from our 40 page retail support brochure. Includes full costing programme in Excel and high quality, photographic images. **FREE**

Vinyl Plotters

We offer high performance, vinyl-resist cutters, from Advanced Plotting Devices and also supply our own-branded, economical CadBlast plotter. They are suitable for cutting all our sandblast resist vinyls and Stained Glass Art Films and are compatible with a wide range of software packages.

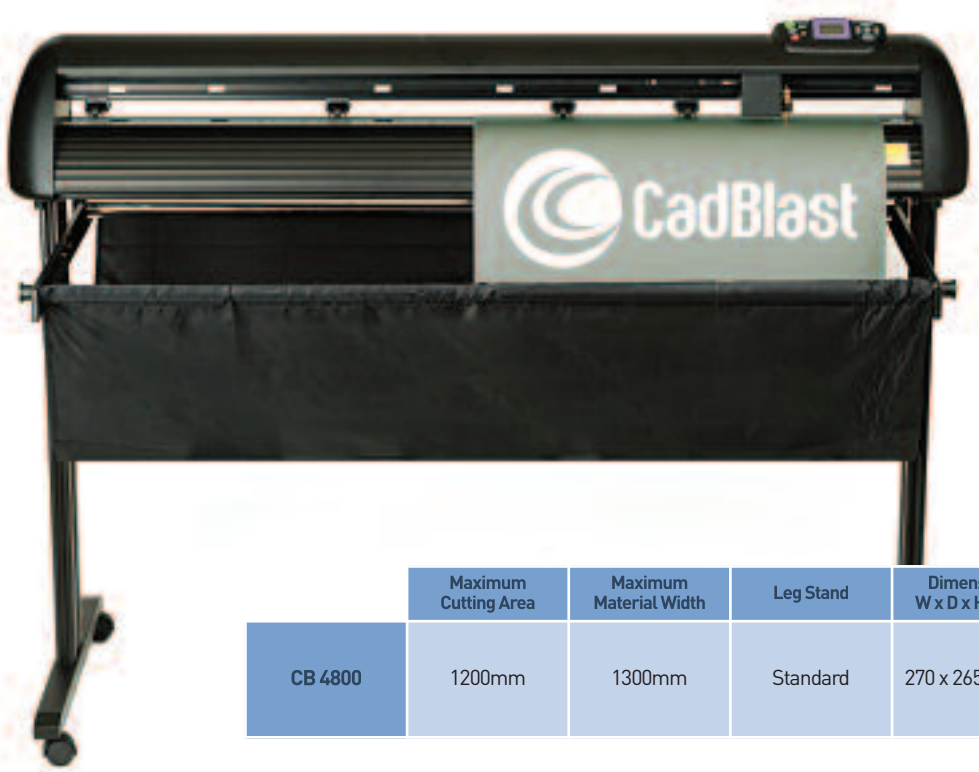
APD 3000 Vinyl Plotter

With a range of 3 machines, we can cater for all budgets and requirements. We have worked with APD for many years and know the pedigree of the machine with hundreds of installations worldwide.

APD plotters are capable of cutting up to 2mm thick material and running at speeds of 1100mm/second, making it ideal for the high volumes producer or customers looking to cut extra thick, specialist films easily.

With the easily interchangeable knife and pen attachments, the APD plotters can also produce full size drawings generated by GlassEye Enterprise or other vector based files such as Corel Draw and Adobe Illustrator.

	Maximum Cutting Area	Maximum Material Width	Leg Stand	Dimensions W x D x H (mm)	Software Language Driver	Warranty
APD 2400	600mm	685mm	Optional	250 x 250 x 825	Compatible with all graphics software using HP-GL format	2 years limited warranty
APD 3000	750mm	840mm	Standard	250 x 250 x 978		
APD 4000	1000mm	1105mm	Standard	250 x 250 x 1257		

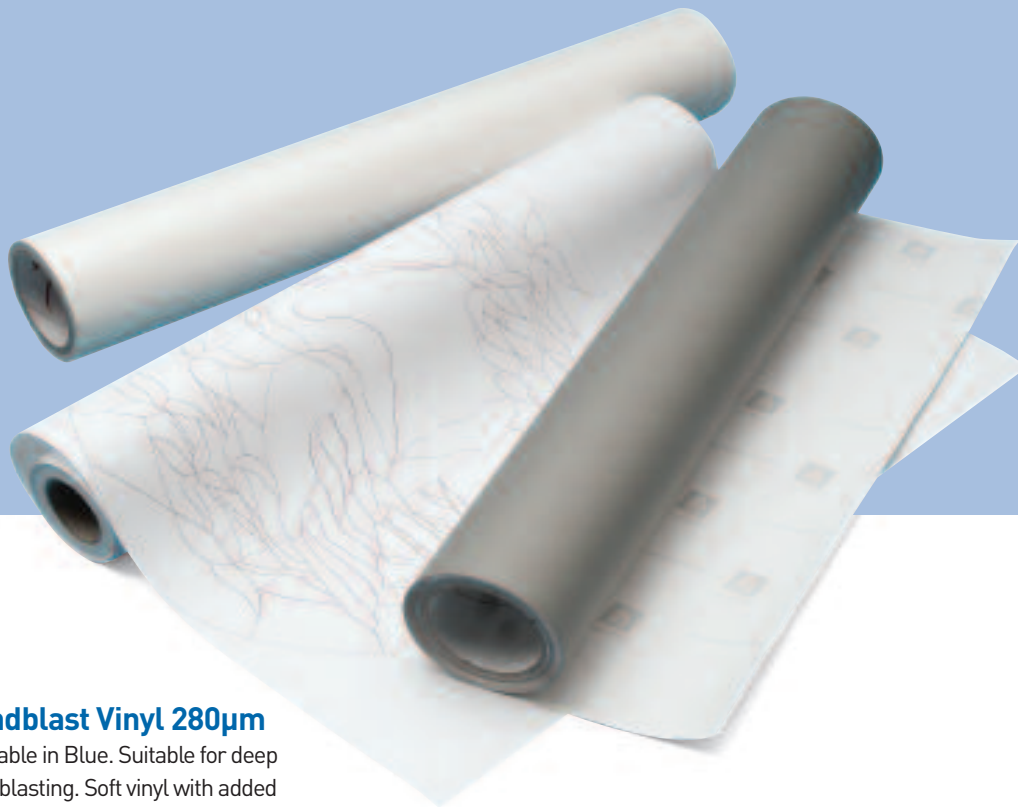


CadBlast CB 4800 Vinyl Plotter

Our own branded CadBlast cutter is ideal for customers looking for an economical solution to vinyl cutting and who wish to cut larger media. With a cutting width of up to 1220mm and steel rollers which prevent slipping on material lengths up to 3m, the CB 4800 is ideal for cutting large resists and its 40mm x 80mm high resolution backlit screen and easy to use controls, make it ideal for customers who are new to vinyl cutting.

	Maximum Cutting Area	Maximum Material Width	Leg Stand	Dimensions W x D x H (mm)	Software Language Driver	Warranty
CB 4800	1200mm	1300mm	Standard	270 x 265 x 1530	Compatible with all graphics software using HP-GL format	1 year

Vinyls and Papers



Sandblast Vinyl 90µm

Available in Pale Grey transparent. Ideal for surface blasting. Commonly used for acid etching. Film has good 'see through' properties to aid positioning.

Product Code	Description
CBV 90-06150(2)	61cm x 50m (2 rolls)
CBV 90-12250	122cm x 50m
RSMGRYL	76cm x 50m & 46cm x 50m

Sandblast Vinyl 160µm

Available in Black. Ideal for intermediate blasting. Also suitable for use with ColorSpray.

Product Code	Description
CBV160-06125	61cm x 25m
CBV160-12225	122cm x 25m

Sandblast Vinyl 280µm

Available in Blue. Suitable for deep sandblasting. Soft vinyl with added flexibility.

Product Code	Description
CBV280- 06125	61cm x 25m
CBV280-12225	122cm x 25m

Sandblast Vinyl 300µm

Available in Grey. Suitable for deep sandblasting of glass. Rigid type.

Product Code	Description
CBV300–06125	61cm x 25m

Drawing Paper

120gsm bright white drawing paper for all pen plotting requirements.

Product Code	Description
RPLOTPAPER	61cm x 30m

Application Paper

100micron application tape to aid in applying vinyl cut resists.

Product Code	Description
RAPTPEWHT	61cm x 100m

Terms & Conditions of Sale

The following terms apply to all contracts in which RegaLead Limited ('the Company') acts as the seller.

1. Orders

Orders will not be accepted on a sale or return basis and shall be for the minimum quantities published by the company from time to time.

2. Payment

Payment is due 30 days from the end of the month of invoice, subject to credit account approval.

3. Delivery

(1) If there is a delay in delivery because of acts or omissions of the buyer. The buyer shall be responsible for any increased costs which the Company shall incur as a result.

(2) The Company will take all reasonable steps to deliver within a reasonable time, or if a specific date for delivery has been agreed on that date, but it will not be responsible for the consequence of any failure so to do unless it has been agreed in writing when the contract was made that the time for delivery shall be of the essence.

(3) No claims by the buyer against the Company shall be valid unless notified to the Company in writing within the following limits:

a) In the case of short delivery within 5 days of delivery.

b) In the case of loss or non delivery of the whole of a consignment within 14 days of:-

i) Being notified by the Company that the goods are in transit or,

ii) The date of the Company's invoice, whichever is the earlier?

4. Defects

If any goods supplied by the Company shall be defective in quality or in quantity or in any other way, then the Company will, at its discretion, either replace the goods or refund (give a credit note for) the purchase price but shall not be under any further liability.

5. Risk and Title

(1) The risk in any goods supplied by the Company shall pass to the buyer on delivery to the buyer.

(2) **The ownership of any goods supplied by the Company shall not pass to the buyer until the goods have been paid for in full.**

6. Prices

Any prices quoted in any price list, catalogue or advertisement of the Company shall only be for the guidance of buyers and shall not constitute an offer to sell at those prices. The contract price, unless otherwise specifically agreed, shall be calculated in accordance with the Company's price list and payment terms in force on the date of despatch of the goods which may be altered by the Company at any time without notice.
